Pavan Kumar Pujari

7207279688 pavan.pwr29@gmail.com Kurnool, Andhra Pradesh

Summary

Data Engineer with 7+ years of IT experience, including 4 years specializing in data engineering. Expertise in designing, developing, and implementing scalable data pipelines and data warehouse solutions using AWS services (S3, EMR, Glue, Redshift), Apache Spark, Hadoop, and Python. Proficient in building robust cloud-based data platforms and optimizing data workflows for enhanced performance and reliability.

Experience

SummitWorks

Data Engineer — Dec 2023 - Dec 2024

Bangalore, Karnataka

- Developed and tested Spark scripts for MSRP calculations across all Wholesale workflows, guaranteeing 100% accurate logic implementation.
- Automated ETL processes using AWS Glue, including data cleansing, validation, and transformation, resulting in a 20% reduction in manual data processing time.
- Successfully migrated multiple Jenkins CI/CD pipelines to Apache Airflow by translating existing workflows into Python-based DAGs, optimizing task dependencies, scheduling, and execution, resulting in improved automation, scalability, and maintainability of deployment processes.
- Designed and managed AWS S3 data lakes, implementing lifecycle management and versioning policies to optimize storage costs and ensure data recoverability.
- Developed and implemented scalable data pipelines to ingest, transform, and load large volumes of data from diverse sources using Apache Spark and AWS EMR, improving data processing speed by 30%.
- Defined and automated data pipelines using Airflow, resulting in a 25% reduction in operational overhead and improved data pipeline reliability.
- Performed comprehensive data quality checks on inventory metrics, identifying and resolving discrepancies, enhancing data accuracy, and improving business insights.

Incedo

Data Engineer — May 2020 - Apr 2023

Bangalore, Karnataka

- Collaborated with business teams to gather requirements and designed data solutions within Hadoop ecosystems to meet organizational needs.
- Developed Spark and shell scripts for extracting large volumes of data from diverse sources, transforming data, and loading it into HDFS and Hive.
- Created Hive external tables with date-based partitioning to efficiently store and manage daily data in HDFS.
- Migrated all existing Hadoop jobs to Spark to improve performance, scalability, and processing efficiency.
- Developed tables aligned with ICD documentation and created views to visualize data lineage within the Teradata environment.
- Participated in code migration activities and managed scheduled jobs using ESPX scheduler to ensure reliable data processing workflows.
- Utilized GLU and PMF internal frameworks loaded into Teradata for comprehensive data analysis and reporting.
- Utilized PySpark to load data from diverse sources into Hive, facilitating efficient data processing and storage to support the data science team.

- Developed data masking strategies for specific data sources and defined Data Definition Language (DDL) statements in Teradata to ensure data security and integrity.

VSMT Solutions

Java Developer

Mar 2017 - May 2020

Hyderabad, Telangana

- Developed JSP pages aligned with business requirements to enhance the functionality and user interface of the e-commerce platform.
- Created POJO classes in accordance with project specifications, utilizing Hibernate for efficient ORM and database interactions.
- Collaborated in designing and implementing view pages within the Spring MVC framework to ensure seamless integration and functionality, improving application maintainability.
- Conducted comprehensive unit testing to verify application functionality, improve code quality, and ensure robustness, reducing bug reports.
- Developed custom exceptions to handle user data errors effectively, improving application reliability and user feedback mechanisms, enhancing user experience.
