Jagadish D

Phone No :8341557268
Email : deringulajagadish14@gmail.com

Professional Summary:

- **Having 4.2years of comprehensive IT experience in applications development and platforms including Apache Hadoop, Apache Spark, and AZURE Services**
- **Hands-on experience in Big Data projects using Hadoop, Hive, PySpark, Azure Data Factory, Azure Gen2lake, Azure SQL server, Azure Data Bricks, Azure Key Vault. experience in building Azure Data Bricks (ADB) PySpark- Python, Spark-SQL Notebooks**
- **to perform data transformations.**
- **Good experience in implementing end-to-end Data Migration including both Data ingestion using Azure Data Factory and Data Processing using Azure Data Bricks.**
- **Worked in ADF components Linked services, Data sets, Integration runtime, Pipelines, Activities and Triggers.**
- **Implemented pipelines using ADF activities like Lookup activity, for each activity, copy activity, notebook activity, Stored procedure activity, set variables, get metadata activity, delete activity, and conditional statements.**
- **Having hands on maintaining Delta Lake and maintaining data in different zones Layer1(Bronze), Layer2(Silver), and Layer3(Gold).**
- **Developed extraction flow using Azure Data Factory which will be handling incremental as well as full data load.**
- **Involved in PySpark development to implement the Batch validation, and Delta Identification Tables implementation.**
- **Worked with Agile methodology (sprint planning, estimation, and tracking of deliverables to ensure delivery of high-quality work with daily iteration.**
- **Hands-on Experience in writing notebooks using Pyspark.**

Educational Qualification:

- **Bachelor of Technology (B.Tech) in mechanical from JNTUA in year 2021 .**

PROFESSIONAL SUMMARY:

- **worked as a software engineer in ACCENTURE from APR 2021 to Tilldate.**

Technical skills:

- **Language and framework: Python, Pyspark, Sql**
- **Databases : SQL SERVER**

- **Azure Services : Azure Data Bricks (Pyspark, Spark-SQL), Azure SQL Server,**
- **Azure Data Factory**

PROFESSIONAL EXPERIENCE:

PROJECT-1:

Client name : Kroger
Project name : Product Sales(Retail)
Technologies & Environment : Azure Data Bricks, Azure Data Factory, Python, Pyspark, SQL
Role : Pyspark Developer

PROJECT DESCRIPTION :

The Kroger Company is an American company that operates supermarkets and multi-department stores throughout the United States and it operates 2,719 grocery retail stores under its various banners and divisions in 35 states. The Kroger Company is the largest supermarket operator in the U.S. by revenue and the country's fifth-largest general retailer, Kroger is ranked #17 on the Fortune 500 rankings of the largest U.S. corporations by total revenue.

RESPONSIBILITIES:

- **Involved in gathering requirements from business analysts and analyzing requirements.**
- **Developing ADB notebooks using Pyspark - SQL for transforming and aggregating data from multiple sources.**
- **Created Delta Lake Tables and loading files into Delta Lake tables using Pyspark notebooks.**
- **Created Azure data Factory Pipelines to extract data from SFTP source systems to Azure cloud.**
- **Developed a generic and reusable framework to implement Slowly Changing Dimensions ● (2) and Facts.**
- **Written Pyspark code to transform and load data from staging to curated layer (foundation layer).**
- **Provide the Data to the powerBI Reporting team as per the business requirements.**
- **Implemented ADF pipelines for Data ingestion and Data processing.**
- **Scheduled the pipelines using Triggers.**
- **Attend the client calls to clarify the requirements related if any.**
- **Implemented the Data in Delta Lake using Azure Data Factory.**
- **Perform and assist developers in analyzing code/issues for quick and effective resolution.**

PROJECT-2:

Client name : Lowe's
Project name : Product Sales(Retail)
Technologies & Environment : Azure Data Bricks, Azure Data Factory, Python Pyspark, SQL, Synapse, power
Role : Pyspark Developer

PROJECT DESCRIPTION: **The purpose of this project is to store huge amount of data and to perform Data Analysis on the Retail data available from a retail store. One of the key things we focus to provide a unique and personalized customer experience when the user shops at our website. This means understanding customers' likes and dislikes, and shopping patterns. Data from these data points could be structured and semistructured in a few cases. The data set contains retail transactions of stores and all this data is collected, aggregated, and will be performing data analysis to help the retail chain which customers are purchasing the products and the buying patterns of the product and help the retail chain to improve its operations.**

RESPONSIBILITIES:

- **created Azure data Factory Pipelines to extract data from source systems to Azure cloud.**
- **Developing ADB notebooks using Pyspark - SQL for transforming and aggregating data from multiple sources.**
- **Created Delta Lake Tables and loading files into Delta Lake tables using Pyspark notebooks.**
- **Developed a generic and reusable framework to implement Slowly Changing Dimensions 2 to create Fact and Dimensions.**
- **Written Pyspark code to transform and load data from staging to curated layer (foundation layer).**
- **Provide the Data to the powerBI Reporting team as per the business requirements.**
- **Implemented ADF pipelines for Data ingestion and Data processing.**
- **Scheduled the pipelines using Triggers.**
- **Attend the client calls to clarify the requirements related if any.**
- **Implemented the Data in Delta Lake using Azure Data Factory.**
- **Perform and assist developers in the analysis of code/issues for quickly and effective Resolution.**
