Python

Jenkins CI

Sonarqube

Design Patterns

PROFILE SUMMARY

Experienced C++ developer and technical lead with strong expertise in software design, multithreaded programming, and system-level development. Skilled in agile development, design patterns, and data structures & algorithms. Passionate about building robust software solutions, mentoring teams, and delivering high-quality projects.

EDUCATION

2015 B.Tech/B.E.

SRMSCET
Bareilly

WORK EXPERIENCE

May 2024 - Sep 2025

Senior Software Developer

GE Healthcare(J2W payroll)

1. Contributed to design, development and Deployment of standalone c++ based multithreaded software (i.e Software Update Manager) As a part of GE XRAY “remote software delivery” program which helps in upgrading Xray systems remotely, saving Field-Engineers to visit premises.
2. This e-Delivery software running on GE medical devices, automatically downloads new Software Updates from remote cloud server.
3. Working in line with senior architects and cross functional business units , have responsibility for designing and developing the solution and further enhancing the new feature sets to this software module in fast paced agile development environment.
4. Integrated Gtest for unit testing of the different modules of the project.
5. Integrated Bullseye code coverage and implemented sonarcube quality gates for legacy and new codes.
6. Implemented automated solution based on shell scripting to install New SUSE Linux OS + system application on Xray system with single click.
7. As a part of XRAY OS engineering team, we enabled solution for easy installation , configuration of SUSE Linux OS and other applications onto XRAY-System.
8. Implemented gRPC replacing DDS-RTI third party for cost saving.

Aug 2021 - May 2024

Team Lead

BYJUS

Led a cross-functional team of 15—20 engineers, driving a productive and collaborative development environment while mentoring junior members.
Architected and oversaw development of the Byju’s Home Learning Program (BHLP), managing post-production, feature enhancements, and ensuring high-quality deliverables.
Directed the design and implementation of interactive learning games, physics simulations, and After Effects plugins, enhancing

overall learning content and user engagement.
Designed and reviewed POCs and prototypes for new projects using C and C++, applying key design patterns (Singleton, Adapter, Factory, Builder, Command, Strategy) to ensure scalable and maintainable solutions.
Managed specialized teams SQNA projects (5—6 members), coordinating timelines, quality standards, and cross-team collaboration.

Feb 2016 - Jul 2021

Senior Associate

USAunivquest, South Delhi

Developed a US college counseling application to assist students in building their profiles and recommend colleges based on student data and compatibility metrics.
Implemented core functionalities using C++ STL, data structures, algorithms, and applied design patterns (MVC, structural, creational, behavioral) for scalable and maintainable code.
Contributed to the Home Learning Program projects, optimizing platform features to enhance user experience and learning efficiency

Projects

18 Months

Software Update Manager — GE Healthcare

Developed a standalone C++ multithreaded software to remotely deliver software updates for GE X-ray systems, reducing field engineer visits.
Automated download and installation of updates from cloud servers.
Integrated unit testing (GTest), code coverage (Bullseye), and quality gates (SonarQube).
Implemented automated SUSE Linux OS installation scripts and simplified configuration of X-ray systems.
Replaced DDS-RTI with gRPC, improving efficiency and reducing costs.

36 Months

BYJU's Home Learning Program (BHLP) — BYJU's

Led post-production and feature development for the most successful K12 learning program.
Developed interactive learning games and physics simulations using C++ and C.
Built POCs and prototypes for new projects, applying design patterns like Singleton, Adapter, Factory, Builder, Command, Strategy.
Managed team (4—5 members) and SQNA project team (5—6 members), ensuring timely delivery.
Developed After Effects plugins to enhance learning media.

60 Months

Mypat — USAunivquest

Developed a US college counseling application to assist students in building their profiles and recommend colleges based on student data and compatibility metrics.
Implemented core functionalities using C++ STL, data structures, algorithms, and applied design patterns (MVC, structural, creational, behavioral) for scalable and maintainable code.
Contributed to the Home Learning Program projects, optimizing platform features to enhance user experience and learning efficiency.
