Objective

Highly motivated **Azure/DevOps Engineer** with **5+ years** of extensive experience in Software Development Life Cycle (**SDLC**) including requirements analysis, design specification, coding and testing of enterprise applications. Adept in **DevOps, AWS, Azure DevOps** and **Linux administrator** roles with Implementation of **CI/CD pipelines** in Azure and solving complex problems with creative solutions, deploying and releasing code from one environment to other and tightly maintaining cloud infrastructure in multiple environments.

Professional Summary

- Experience on various code management tools like **GIT**. Experience in branching, tagging, and maintaining the version across the environments working on Source code Management (Version control system) tools like **GIT.**
- Experienced as a Build and release engineer in automating, building, deploying, and releasing of code from one environment to multiple environments.
- Created Azure DevOps ecosystem for various repos, implement **CI/CD**, automate processes using scripts, etc. Integrated application such **as .Net on Azure** with components such as **Kubernetes, Azure App Service etc.**
- Expertise in creating the Build Pipelines, Release pipelines and deployments using Service principles
- Experience on **Docker** and writing different Docker files for creating containers which will be used as a build node to build **dotnet, java application**.
- Extensive experience in designing, deploying, and managing **Kubernetes clusters** in production environments.
- Expertise in container orchestration using **Kubernetes.**
- Kubernetes is being used to orchestrate the deployment, scaling and management of Docker Containers.
- Collaborating with software engineers to optimize application performance and scalability in Kubernetes environments.
- Experience on Deployment Automation & Containerization (Docker, Kubernetes).
- Experienced with infrastructure as code & Configuration management with tools **like Terraform, Ansible etc.**
- Experience with cloud platform Azure, services such as **Azure Synapse analytics, Azure Kubernetes services, Azure cluster services, App services.**
- Generated reports using **SonarQube** (Integration with Yaml pipeline) which covers different areas of Code Quality like potential bugs, Code Coverage, coding rules.
- Sonar configuration for quality gates, quality profiles and integrated in CI Pipeline.
- Experience in writing python scripts to configure and baseline the servers with default configurations. Configured crontab to schedule the jobs.
- Worked on Serverless services, created and configured **HTTP** Triggers in the Azure Functions with application insights for monitoring and performing load testing on the applications using the **Visual Studio** Team Services (VSTS) also called as Azure DevOps Services.
- Experience integrating applications with advanced application monitoring tools such as **Grafana, Prometheus, Datadog, Splunk**.
- Experience in creating python scripts with functions, variables, conditions, redirecting the output to log files and checking the exit status
- Build Management for dotnet application using **Nuget** and experienced in full Software Life Cycle including **Waterfall and Agile methodologies**.
- Good analytical and communication skills and ability to work independently with minimal supervision and perform as part of a team.

Technical Skills:

Containerization platform and Service Mesh tools	Kubernetes, Istio
Continuous Integration Tools	Azure Yaml Pipeline.
Scripting	Shell scripting, Powershell
Operating Systems	Windows and Linux.
Infrastructure as a code	Terraform.
Web/Application Servers	Nuget, HTTP Server.
Static code analysis	SonarQube
Bug Reporting Tools	JIRA, Azure boards.
Cloud	Azure, AWS
Azure Services	Azure Active Directory, Azure Function, Virtual Machine, Azure SQL, Azure Pipelines, Azure Artifacts, Azure Repos, Azure App Service
Container tools	Docker.
Version Control Tools and Git Ops tools	Git and Argo CD
Monitoring Tools	Grafana, Prometheus, Zabbix, Splunk, Datadog, OpsGenie
Configuration Management Tools	Ansible.

EDUCATION DETAILS:

Completed B.Tech Mechanical Engineering from Sri Sarathi institute of engineering and technology.

Experience:

- Worked as a Software Engineer in **Neosoft Pvt Ltd** from **22Jan -2024 to 22July-2025.**
- Working as a Senior Engineer **for Ignitarium Technology Solutions Pvt Ltd** from **05June -2023 to 08Dec -2023.**
- Worked as a Software Engineer for **Inventzo systems India Pvt Ltd** from **22Nov- 2019 to 05May-2023.**

Projects:

Client: Prism HR

PROJECT 1:L2 Support 24*7 **22 Jan - 2024 to 22July-2025**

Environment: Git, Azure, Yaml pipelines, Kubernetes, Docker, Terraform, Linux, Production support, Sales force cases, Jira

Description:

Prism HR, the industry leader in HRO technology for 40 years, empowers PEOs and Payroll Bureaus like you with the technology to deliver efficient, scalable and engaging HR and payroll solutions and services to your clients.

Roles and Responsibilities:

- Code merging using **GITHUB** pull requests and Conflict resolutions.
- Involving creation of Azure pipelines for **CI/CD** and worked on azure repos as a code base.
- Used Azure Yaml pipelines as a build tool on .net core project for the development of build artifacts on the source code.
- Worked on Azure components such as **Azure AD, API management, Application Gateway, Logic app**, functional app, storage account, key vault, container registry, **Webapp, MSSQL, AKS, Azure Migrate, Log analytics, alert monitoring etc.**
- Created Azure DevOps ecosystem for various repos, implement CI/CD, automate processes using

scripts, etc. Integrated application such as .Net on Azure with components such as **Kubernetes, Azure App Service etc.**

- Kubernetes is being used to orchestrate the deployment, **scaling, and management of Docker Containers.**
- Experienced on Deployment Automation & Containerization such as Docker & Kubernetes.
- Installation and Configuration of SonarQube. Integrated the **SonarQube with Nuget** to perform the code analysis.
- Worked on different environments like **Dev, QA**, Staging and Production deployment in Azure cloud platform.
- Strong in monitoring and observability, with experience building and customizing **Grafana dashboards to visualize application** and system logs, and writing complex queries to identify error patterns and system bottlenecks.
- Administered alerting and escalation workflows **via OpsGenie**; integrated with **Jira and Datadog** for seamless incident management.
- Handled daily support tickets; resolved incidents related to **AKS, VMs, ADF**, storage, networking, and identity services.
- Experienced in creating Continuous Integration CI/Continuous Delivery (CD) pipeline for Azure Cloud Services.
- Experience with cloud platform Azure, services such as Azure Synapse analytics, Azure Kubernetes services, Azure cluster services, App services.
- Worked on the creation of **ARM templates** to deploy service accounts, storage accounts**.Build .Net code on to Azure Devops** servers using triggers along with continuous Integration.
- Provisioned load balancer, auto-scaling group and launch configuration for micro services using Ansible.
- Integrating applications with advanced application monitoring tools such as **Prometheus, Datadog**.
- Working on Created Docker images using a Docker file, worked on Docker container snapshots, removing images, and managing Docker volumes.
- Responsible for development that maintain and enhance the Kubernetes platform.
- Developed and maintained Continuous Integration (CI) using tools in Azure DevOps spanning multiple environments, enabling teams to safely deploy code **in Azure Kubernetes Services (AKS) using YAML scripts.**
- Developed and maintained a Kubernetes-based backup and disaster recovery solution, ensuring business continuity and reducing recovery time by 50% in the event of a disaster.
- Designed and developed a Kubernetes-based storage solution, increasing storage capacity by 50% and reducing storage costs by 30%.
- Deploying, managing, and operating scalable, highly available, secure, and fault tolerant systems on Kubernetes and AKS for our customers.
- Worked on deployment automation of all the micro services to pull image from the private Azure container registry and deploy to AKS using Service principle.
- Works closely with other engineers and architects on system design and configuration.
- Responsible for product evaluation scheduling and planning, infrastructure **QA and test automation, and infrastructure lifecycle management.**
- Integrated Docker container orchestration framework using Kubernetes by creating pods, Config Maps, and deployments. Development of automation of Kubernetes clusters with Ansible, writing playbooks.
- Worked with Terraform templates to automate the Azure IaaS virtual machines using terraform modules and deployed virtual machine scale sets in production environment.
- Collaborating with software engineers to optimize application performance and scalability in Kubernetes environments.

  Environment: Azure, Kubernetes (AKS), Datadog, OpsGenie, Grafana Dashboards, Prometheus, Zabbix, Jira, Azure DevOps, ADF, VMs, Azure Networking, HealthTech Products.
- **Provided 24/7 production support** for a portfolio of on-premises and AWS-based Media Supply Chain applications and services.
- Resolved production application issues and media content-related incidents, ensuring minimal downtime and rapid service restoration.
- Perform initial troubleshooting and resolve **Salesforce** errors and access issues and working on

salesforce tickets, checking the logs, Provide support during salesforce deployments
- Actively participated in technical discussions and knowledge-sharing sessions to improve team efficiency and cross-functional understanding.
- Investigated root causes of recurring production issues and implemented preventive measures to ensure long-term stability.
- Documented new workarounds, resolutions, and standard operating procedures to enhance support knowledge base and team agility.
- Adhered to support team processes, standards, and best practices while recommending and implementing process improvements.
- Monitoring the alerts for production servers, Correlating the issues and Analise the root cause and checking and working with metric, logs. Software GitHub, Slack, Google Meet, or similar communication tools.
- Controls & Automation Working Knowledge of Sensors, Manufacturing Equipment, and PLCs
- **ITIL Framework Knowledge (incident management, problem management, change management)**
- Applied software design patterns to build scalable, reusable solutions and optimized cloud resources through right-sizing, auto-scaling, and cost governance.
- Improved application performance using **design patterns** while achieving significant **cloud cost** savings via automation, monitoring, and efficient resource utilization.

PROJECT 2: Automated Test System **05June -2023 to 05Dec-2023**
Environment: Git, Yaml pipelines, Azure Synapse Analytics, Azure Database, Linux.
Roles and Responsibilities:
- Managing source code repositories and branching strategies to maintain code quality and facilitate collaboration among developers.
- Monitoring and ensuring the performance, availability, and scalability of applications and environments in Azure.
- Used Azure Yaml pipelines as a build tool on .net core project for the development of build artifacts on the source code.
- Worked on Azure components such as Azure AD, API management, Application Gateway, Logic app, functional app, storage account, key vault, container registry, Webapp, MSSQL, AKS, Azure Migrate, Log analytics, alert monitoring etc.
- Created Azure DevOps ecosystem for various repos, implement CI/CD, automate processes using scripts, etc. Integrated application such as .Net on Azure with components such as Kubernetes, Azure App Service etc.
- Implementing infrastructure as code (IaC) practices using tools like Azure Resource Manager (ARM) templates or terraform.
- Collaborating with development teams to identify and resolve build or deployment issues and streamline development workflows.
- Configuring and managing Azure DevOps services, such as Azure Boards, Azure Repos, Azure Pipelines, and Azure Artifacts.
- Build Artifact for azure synapse and deploy artifact in production environment of azure synapse analytics.
- Integrate SQL SERVER MANAGEMENT with Visual Studio and Push the code to Azure repos and creating .sln file for database files.
- Build Artifact for Database SQL files and deploy artifact in production environment of Database SQL SERVER MANAGEMENT.
- Conducting system troubleshooting and problem-solving across platform and application domains.
- Worked on different environments like Dev, QA, Staging and Production in Azure cloud platform.

PROJECT 3: Ebates Online Shopping Portal **01Jan - 2021 to 05May-2023.**
Environment: Git, Azure, Yaml pipelines, Kubernetes, Docker, Terraform, Linux.
Description:
Ebates.com is an online shopping portal which gives cash back for the purchases of customers. This site is

used to display different coupons and discounts available for the user and management of their account Ebates is all about saving money and getting Cash Back whenever you shop online When you become a member and shop through E-bates, you can save money every year on the things you are already buying. Once the user shops from the store those are displayed in Ebates.com site, cash back will be credited to their account.

Roles and Responsibilities:

- Code merging using **GITHUB** pull requests and Conflict resolutions.
- Involving creation of Azure pipelines for CI/CD and worked on azure repos as a code base.
- Used **Azure Yaml pipelines** as a build tool on .net core project for the development of build artifacts on the source code.
- Worked on **Azure** components such as **Azure AD**, **API management**, Application Gateway, Logic app, functional app, storage account, key vault, container registry, **Webapp**, **MSSQL**, **AKS**, **Azure Migrate**, Log analytics, alert monitoring etc.

- Created **Azure DevOps ecosystem** for various repos, implement **CI/CD**, automate processes using scripts, etc. Integrated application such as **.Net** on **Azure** with components such as Kubernetes, **Azure App Service** etc.
- Kubernetes is being used to orchestrate the deployment, scaling and management of Docker Containers.
- Experienced on Deployment Automation & Containerization such as Docker & Kubernetes.
- Installation and Configuration of **SonarQube**. Integrated the **SonarQube** with **Nuget** to perform the **code analysis**.
- Worked on different environments like Dev, QA, Staging and Production deployment in Azure cloud platform.
- Experienced in creating Continuous **Integration CI/Continuous Delivery** (**CD**) **pipeline** for Azure Cloud Services.
- Experience with **cloud platform Azure, services** such as **Azure Synapse analytics, Azure Kubernetes services, Azure cluster services, App services.**
- Worked on the creation of **ARM templates** to deploy service accounts, storage accounts.Build .Net code on to Azure Devops servers using **triggers** along with **continuous Integration**.
- Provisioned **load balancer**, **auto-scaling** group and launch configuration for micro services using **Ansible**.
- Integrating applications with advanced application monitoring tools such as **Prometheus**, **Datadog**.
- Working on Created **Docker** images using a **Docker file**, worked on Docker container snapshots, removing images, and managing Docker volumes.
- Responsible for development that maintain and enhance the **Kubernetes** platform.
- Developed and maintained **Continuous Integration** (CI**)** using tools in Azure DevOps spanning multiple environments, enabling teams to safely deploy code in **Azure Kubernetes Services** (**AKS**) using **YAML scripts**.
- Developed and maintained a **Kubernetes**-based backup and disaster recovery solution, ensuring business continuity and reducing recovery time by 50% in the event of a disaster.
- Designed and developed a **Kubernetes**-based storage solution, increasing storage capacity by 50% and reducing storage costs by 30%.
- Deploying, managing, and operating scalable, highly available, secure, and fault tolerant systems on **Kubernetes** and **AKS** for our customers.
- Worked on deployment automation of all the **micro services** to pull image from the private Azure container registry and deploy to **AKS** using Service principle.
- Works closely with other engineers and architects on system design and configuration.
- Responsible for product evaluation scheduling and planning, infrastructure QA and test automation, and infrastructure lifecycle management.
- Integrated **Docker container orchestration** framework using **Kubernetes** by creating pods, Config Maps, and deployments. Development of automation of **Kubernetes clusters** with **Ansible**, writing playbooks.
- Worked with **Terraform** templates to automate the **Azure IaaS** virtual machines using **terraform**

modules and deployed virtual machine scale sets in production environment.
- Collaborating with software engineers to optimize application performance and scalability in Kubernetes environments.

PROJECT4: Macy's US **22Nov- 2019to 15Dec-2020.**
Environment: Git, CI/CD, AZURE, Docker, Python Scripting.
Roles and Responsibilities:

- Responsible for pushing builds and deployments into QA, UAT and PROD across the BU.
- Troubleshooting day-to-day Build and Deployment issues in various Environments.
- Creating and maintaining DevOps build pipelines.
- Automated process using PowerShell scripting and Azure Automation. Hands on experience in creating ansible playbooks.
- Monitoring and supporting CI/CD pipelines for software deployment.
- Assisting with the management of Azure resources and services.
- Implementing basic automation scripts for build and release processes.
- Collaborating with development teams to troubleshoot deployment issues.
- Participating in learning opportunities to enhance skills in Azure and DevOps tools.
- Conducting root cause analysis for system outages or performance issues.
- Manage the repository permissions in GitHub.
- Creating and modifying the resource group, key vaults and subnets using Azure DevOps through Repo and pipelines according client requirements using terraform.
- Implement CI/CD process for multiple projects using Azure DevOps.
- Write scripted pipeline for various stages involved in CI/CD approach.
- Create Yaml pipeline jobs for .net Applications to Implement CI/CD process.
- Establishing standards for build artifact management and build configuration. Documentation of change management and best practices.
- Designed and maintained code repositories in GITHUB and defined workflows as per the release
