PROFESSIONAL SUMMARY

Results-oriented Data Engineer with hands-on experience in designing, developing, and optimizing data pipelines on Azure and AWS cloud platforms. Skilled in building ETL/ELT workflows, managing large-scale data migrations, and delivering analytics-ready datasets for business insights. Proficient in leveraging Azure Data Factory, Databricks (PySpark), Synapse, AWS Glue, Redshift, and S3 for scalable data solutions.

Strong knowledge of real-time and batch data processing, data modeling, and big data frameworks like Spark and Hadoop. Proven ability to collaborate with cross-functional teams, implement data governance practices, and ensure high data quality. Quick learner with a passion for data engineering, analytics, and cloud technologies.

TECHNICAL SKILLS

Cloud Platforms: Microsoft Azure (ADF, ADLS, Databricks, Synapse), AWS (S3, Glue, Redshift, Lambda, EMR)

Big Data & Processing: Apache Spark, PySpark, Spark SQL, Hadoop, Kafka (basics)

Programming & Scripting: Python, SQL

Databases: SQL Server, MySQL, PostgreSQL, Oracle, Redshift

ETL/ELT & Tools: ADF Pipelines, Databricks Notebooks, AWS Glue, Synapse, Power BI

DevOps & Version Control: Git, Azure DevOps, CI/CD

Concepts: Data Warehousing, Data Modeling, Data Governance, Data Security

WORK EXPERIENCE

Data Engineer | Accenture | Dec 2022 – Present- Developing and optimizing large-scale data pipelines on Azure and AWS platforms to deliver analytics-ready datasets.- Building reusable PySpark and Spark SQL transformations for batch and streaming workloads.- Migrating data from legacy on-premises systems to cloud data lakes (Azure Data Lake, AWS S3) and warehouses (Synapse, Redshift).- Implementing best practices in data governance, security, and performance tuning.- Collaborating with cross-functional teams to design scalable data models supporting reporting and AI/ML use cases.- Automating deployments with Azure DevOps CI/CD pipelines to ensure robust, production-ready releases.

Data Engineer | Publicis Sapient | Nov 2021 – Nov 2022- Designed and developed ETL pipelines using Azure Data Factory and Databricks for processing structured and semi-structured data.- Migrated datasets from on-premises sources into Azure Data Lake and Synapse Analytics.- Built reusable PySpark notebooks for data transformation and enrichment.- Collaborated with stakeholders to design scalable data solutions aligned with reporting requirements.- Implemented CI/CD deployment pipelines in Azure DevOps for automated releases.- Ensured data quality through validation, monitoring, and automated testing frameworks.

PROJECTS & RESPONSIBILITIES

1. Fraud Detection Platform – PayPal (Azure Data Engineer)

Tech Stack: Azure Data Factory, Databricks, ADLS Gen2, Synapse Analytics, PySpark, SQL, Azure Monitor, Key Vault, Power BI

Designed and implemented end-to-end data pipelines in Azure Data Factory to ingest real-time and batch datasets from APIs, SQL Server, and flat files into ADLS.

Processed millions of transactions per day in Databricks using PySpark, applying transformations, cleansing, and enrichment for fraud detection models.

Built a layered data architecture (Raw → Curated → Analytics) in ADLS for better scalability and governance.

Developed advanced PySpark scripts leveraging broadcast joins, partitioning, and caching to reduce pipeline execution time by 45%.

Integrated Synapse Analytics with curated datasets for BI reporting and real-time fraud monitoring.

Configured Azure Monitor and Log Analytics to set up proactive monitoring and alerts for pipeline health.

Applied data security best practices using Azure Key Vault for secret management and RBAC for access control.

Automated deployments and releases with Azure DevOps CI/CD pipelines, ensuring reliable delivery across environments.

Partnered with fraud analytics and data science teams to provide ML-ready datasets for predictive modeling.

Delivered interactive Power BI dashboards on Synapse for fraud risk scoring, alerts, and financial reporting.

2. **Digital Ticketing Platform – (Azure Data Engineer)**

Tech Stack: Azure Data Factory, Databricks, ADLS Gen2, Synapse Analytics, PySpark, SQL, Azure Monitor, Power BI

Designed and built data ingestion pipelines in ADF to pull booking, payment, and customer data from MySQL and REST APIs into ADLS.

Processed structured and semi-structured data (JSON, CSV, SQL) in Databricks using PySpark transformations for reporting and analytics readiness.

Implemented incremental and delta load strategies in ADF to optimize data refresh and reduce runtime.

Developed a multi-zone data lake architecture (Bronze, Silver, Gold layers) for raw, cleansed, and analytics data.

Modeled analytical tables in Synapse Analytics to support reporting on seat utilization, payment trends, and sales performance.

Integrated curated datasets with Power BI dashboards to enable real-time reporting for business teams.

Implemented error handling, logging, and alerts in ADF and Azure Monitor to ensure resilient pipelines.

Tuned PySpark jobs with partition pruning, bucketing, and optimized joins for performance improvements.

Documented end-to-end workflows and created reusable notebooks and ADF templates for future deployments.

Ensured data governance and security through RBAC, encryption, and access policies for sensitive payment data.

EDUCATION

B.E. in Computer Science & Engineering – Siddaganga Institute of Technology, VTU Karnataka | 2016–2021 | CGPA: 7.18
