SANJAY V

DATA ENGINEER

+91 96776 02135 HOSUR, TAMIL NADU SanjayPersonal135@gmail.com

ABOUT ME

Curious mind with a constant drive to learn, adapt, and improve every day. I value integrity, creativity, and persistence in both life and work.

PROFESSIONAL SUMMARY

Data Engineer with over 4+ years of experience designing and implementing end-to-end data solutions. Proficient in Python, PySpark, SQL, AWS, and Pandas, with a proven track record in building scalable data pipelines, optimizing workflows, and ensuring data quality for enterprise analytics. Strong problem-solving skills with a deep understanding of big data technologies and cloud platforms.

- **Data Ingestion & Integration** – Developed data integration workflows to enable seamless movement of data across multiple systems and platforms.
- **Data Processing & Transformation** – Built and maintained ETL pipelines using Python and PySpark, handling large-scale data processing and transformation tasks.
- **Data Storage & Warehousing** – Designed and implemented AWS-based data warehouse solutions to support business intelligence and analytics needs.
- **Data Optimization** – Optimized SQL queries for faster data retrieval and aggregation, reducing execution time by 20%.
- **Data Quality & Validation** – Conducted comprehensive data quality assessments, implementing cleansing and validation procedures to ensure accuracy and integrity.
- **Collaboration & Delivery** – Worked closely with cross-functional teams to gather requirements and deliver tailored technical solutions for data-driven initiatives.

PROFESSIONAL EXPERIENCE

- Data Engineer | BOVEN TECHNOLOGIES PVT LTD | Mar 2021 – Present (Bangalore)

PROJECTS

1. **Customer Ticketing Trend System:** Develop data pipeline and implement using Apache Airflow, AWS services (S3, Lambda), and Redshift. The pipeline ingests data from various data sources, performs transformations, and loads the processed data into a Redshift data warehouse for analysis.

   Responsibilities:
   - Design and implement the data pipeline architecture
   - Develop ETL scripts and workflows
   - Handle data transformation and cleansing
   - Automate data ingestion processes,
   - Monitor and troubleshoot pipeline issues
   - Collaborate with stakeholders to understand data requirements

   Project Skills: Python, SQL, AWS, Redshift, Apache Airflow

2.**Customer Transaction Data Pipeline:** Develop a data pipeline to process customer transaction data from various sources. The pipeline will ingest data from AWS S3, transform it using PySpark, and store the processed data in an AWS RDS (MySQL) database. The data will be used to generate insights and reports for business analysis.

Responsibilities:

- 1.Develop ETL (Extract, Transform, Load) jobs using PySpark to process large volumes of customer transaction data.
- 2. Ingest data from AWS S3, perform transformations, and load the processed data into an AWS RDS (MySQL) database.
- 3.Optimize the PySpark jobs for performance and scalability.
- 4.Ensure data quality and integrity throughout the pipeline.

Technical Skills: Python, Pyspark , AWS and SQL

TECHNICAL SKILLS

- **Programming Languages:** Python
- **Big Data Technologies:** PySpark
- **Databases:** SQL
- **Cloud Platforms:** Amazon Web Services (AWS)
- **Data Processing and Analysis:** Pandas, Redshift, Athena
- **ETL Tools:** Apache Airflow, AWS GLUE
- **Version Control:** Git
- **IDE :** Jupyter Notebook

EDUCATION

PRIST University

Feb 2021

Bachelor of Technology in Mechanical

Chennai, Tamilnadu.

DECLARATION

I hereby declare that the information furnished above is complete and true to the best of my knowledge.

Place: Bangalore
