PRADEEP MATAM

Bangalore | +918106552601 | pradeepchanmat@gmail.com | LinkedIn : PradM

PROFESSIONAL SUMMARY

With over **3.6+ years** of experience as a **DevOps and Cloud Engineer**, I specialize in automating infrastructure provisioning, CI/CD pipelines, and cloud deployments across Azure environments. I have hands-on expertise with **Terraform, Azure DevOps, Docker, and Kubernetes** to streamline delivery and ensure system reliability. My work emphasizes building secure, scalable, and automated solutions leveraging **Azure services, PowerShell, Python and Git**, contributing to improved deployment efficiency and operational stability.

EDUCATION

Rowan University| MS in Computer Science | **New Jersey, USA** **[Jan 2021- Aug 2022]**

Jawaharlal Nehru Institute of Technology | Bachelors in Computer Science | India **[July 2015 – May 2019]**

TECHNICAL SKILLS

Cloud & Platforms: Microsoft Azure

DevOps & CI/CD: Azure DevOps, Jenkins, TeamCity, GitHub

Infrastructure as Code: Terraform, ARM Templates

Containers & Orchestration: Docker, Kubernetes (AKS)

Configuration Management: Ansible, PowerShell DSC

Scripting: PowerShell, Bash, Python

Monitoring & Security: Grafana, Azure Monitor, SonarQube, OWASP Dependency Check

Collaboration & Project Management: JIRA, Confluence

Operating Systems: Windows Server, Linux (Ubuntu/CentOS)

PROFESSIONAL EXPERIENCE:

Tech Mahindra (Bangalore) **[Dec 2024 - Present]**

Project: **Enterprise Payment Processing System**
Role: **DevOps Engineer**
Description:

Contributing to the modernization and automation of an **enterprise-grade payment processing** platform, ensuring secure, compliant, and high-availability transaction services. Focused on building scalable CI/CD pipelines, infrastructure as code, and container orchestration to streamline deployments and maintain system reliability across hybrid environments.

Key Responsibilities:

- Designed and implemented end-to-end CI/CD pipelines in **Azure DevOps** to automate build, test, and deployment workflows for real-time **payment** microservices, improving transaction throughput and reducing release cycle times.
- Developed internal backend services using **Python** (**Flask**) to automate transaction validation and deployment workflows, integrating APIs with Azure services for seamless data exchange across microservices.
- Provisioned and managed **Azure resources** (VMs, VNets, Load Balancers, Storage, AKS clusters) using **Terraform IaC**, enhancing deployment consistency and environment reproducibility.

- Configured and administered **Azure Kubernetes Service (AKS)** for containerized financial workloads, enabling **zero-downtime rolling deployments** and **autoscaling** during transaction peaks.
- Designed and optimized **SQL** queries and stored procedures to support backend reporting and data consistency for payment processing systems.
- Implemented **secure credential management** and **policy enforcement** to ensure compliance with financial data protection standards and internal governance controls.
- Integrated **SonarQube** and **OWASP Dependency Check** into CI/CD pipelines to detect vulnerabilities early, reducing potential risk exposure in production environments.
- Built **Grafana dashboards** integrated with **Azure Monitor** and **Prometheus** to visualize system performance, transaction latency, and error trends across microservices.
- Automated deployment workflows and configuration management using **Ansible** and **PowerShell**, ensuring consistent provisioning across **Windows** and **RHEL** environments.
- Collaborated with QA and development teams to optimize release cycles, reducing rollback frequency and enhancing service reliability for business-critical payment APIs.
- Authored detailed infrastructure and operational documentation, including **runbooks** and incident response procedures for production environments.
- Mentored junior DevOps engineers, promoting best practices in cloud security, infrastructure automation, and CI/CD design.

Environments: Terraform, Azure Kubernetes Service (AKS), Docker, SonarQube, Git, PowerShell, Bash, YAML, Windows Server, Linux (Ubuntu/CentOS), JIRA, Ansible, Confluence, Grafana, RHEL, Python.

Intel Corporation (Arizona, USA) **[Nov 2022 – Nov 2024]**

Project: **CI/CD and Cloud Automation for Validation and Production Systems**
Role: **DevOps Engineer**
Description:
Contributed to end-to-end DevOps automation and cloud modernization initiatives for validation and production environments. Improved deployment efficiency and strengthened security compliance through CI/CD, IaC, and containerization practices.
Key Responsibilities:

- Developed **Python automation** scripts for Stability and Reliability Control (SRC) data monitoring using **MongoDB**, improving system reliability tracking.
- Enhanced automation scripts using **Python** (**Flask**) for building lightweight APIs that exposed validation data and CI/CD metrics to cross-functional monitoring dashboards.
- Designed and maintained **TeamCity** CI/CD pipelines using **MSBuild** and **NuGet** to automate build, test, and deployment workflows, reducing manual interventions.
- Implemented **infrastructure automation** with **PowerShell DSC** for consistent server provisioning and configuration management.
- Developed and maintained **Ansible playbooks** to automate environment configuration, system updates, and application deployment workflows across validation systems.
- Developed and deployed **custom job scheduling software** to streamline validation and testing processes, improving operational efficiency.
- Built and managed **Windows imaging environments** using **Microsoft Deployment Toolkit (MDT)** for desktops and virtual machines.
- Created a continuous integration pipeline for **Windows Image Creation**.
- Implemented **Grafana**-based monitoring and alerting to track CI/CD pipeline performance, system health, and build stability across validation environments.
- Published and versioned build outputs in **Azure Artifacts**, ensuring controlled artifact lifecycle and traceability.
- Automated **Azure infrastructure provisioning** (VMs, storage accounts, AKS clusters) using **Terraform Infrastructure as Code (IaC)**.

- Deployed **containerized microservices** to **Azure Kubernetes Service (AKS)** with **zero-downtime rolling updates**.
- Managed **Git repositories**, enforcing branching strategies, access controls, and peer code review workflows.
- Integrated **SonarQube** and **OWASP Dependency Check** into pipelines, enhancing security compliance by **20%** and reducing pre-deployment vulnerabilities.
- Facilitated **Agile delivery** using **JIRA** for sprint planning and **Confluence** for documentation and cross-team collaboration.
- Collaborated with development and QA teams to increase release frequency, optimize build times, and minimize rollback incidents.
- Provided **L1/L2 production support**, ensuring SLA adherence, proactive incident management, and high system availability.

Environments: Python, PowerShell, TeamCity, Azure DevOps, Terraform, SonarQube, OWASP Dependency Check, Git, Azure Artifacts, Azure Kubernetes Service (AKS), Der, MongoDB, Microsoft Deployment Toolkit (MDT), Windows Server, C#, Bash, Ansible, JIRA, Confluence, MSBuild, NuGet, Grafana.

Accenture (Hyderabad) **[Jul 2019 – Dec 2019]**

Project: Landing Zone Implementation

Role: Software/Infrastructure Consultant

Description:

Contributed to the setup and automation of Azure Landing Zone environments for enterprise workloads. Focused on infrastructure provisioning, automation, and security configuration to establish scalable and secure cloud foundations.

Key Responsibilities:

- Assisted in the automation of enterprise Landing Zone deployments using Terraform integrated with Azure DevOps pipelines.
- Configured and managed Virtual Machines, storage accounts, and Azure networking components via the Azure portal.
- Implemented high availability and scalability using Azure Resource Manager (ARM) deployment models.
- Designed and applied Network Security Groups (NSGs) to control inbound and outbound traffic across VMs, NICs, and subnets.
- Managed Azure RBAC, Active Directory (AD), and Application Insights for access control and monitoring.
- Set up Azure Site Recovery (ASR) for disaster recovery and failover configurations.
- Developed PowerShell scripts to automate VM shutdowns during off-business hours, reducing resource costs.
- Monitored cloud services performance and health using Azure Monitor and Log Analytics.

Environments:

Azure Cloud, Terraform, Azure DevOps, PowerShell, ARM Templates, Azure Monitor, Azure Site Recovery (ASR), Azure Active Directory, Network Security Groups (NSGs), Application Insights, Windows Server.
