SUMMARY

Full Stack Developer with 4 years of experience in designing and developing scalable web applications using **Express.js, React.js, and Node.js**. Proficient in building secure RESTful APIs, implementing role-based access control, and optimizing performance with caching and database tuning. Skilled in delivering end-to-end solutions, collaborating with cross-functional teams, and deploying production-ready applications that enhance user experience and business value.

SKILLS

Back-End Development: Node.js, NestJS, Express.js, PHP, Laravel, CodeIgniter, Redis
Front-End Development: React.js, TypeScript, JavaScript, HTML5, CSS3, Tailwind CSS, Bootstrap
Databases: MySQL, PostgreSQL,
Tools & Platforms: Git, Swagger, Postman

WORK EXPERIENCE

Indexnine Technologies Pvt. Ltd

Senior Software Engineer — Apr 2024 - Present

- Leading **full-stack development** of scalable, high-performance web applications using **React.js, Node.js, and NestJS**.
- Architecting and implementing **microservices-based APIs**, ensuring modularity, scalability, and ease of integration with third-party and cloud services.
- Designing and optimizing **backend architectures** with **Redis caching strategies**, reducing response times and improving system efficiency.
- Collaborating with **product managers, designers, and frontend teams** to gather requirements and deliver complex features within deadlines.
- Implementing **secure authentication and authorization mechanisms (RBAC, JWT)** to strengthen application security.
- Driving **code reviews, best practices, and technical mentorship**, ensuring high code quality and maintainability across teams.
- Delivering **production-ready software solutions** that align with client requirements and business objectives.

Sonara Pvt. Ltd

Full Stack Developer — Oct 2021 - Dec 2023

- Designed, developed, and maintained **scalable web applications** using **React.js, Node.js, and Express.js**, supporting multiple client-facing platforms.
- Built and optimized **RESTful APIs** and database schemas in **MySQL and PostgreSQL**, ensuring data integrity, security, and high availability.
- Implemented **performance improvements** with database indexing, caching strategies, and query optimization, reducing server response times.
- Collaborated with **cross-functional teams** to deliver over **five full-cycle products**, meeting business and technical KPIs.
- Integrated **third-party APIs and services** to enhance application functionality and streamline business processes.
- Contributed to **end-to-end development** — from requirement analysis and system design to testing, deployment, and ongoing maintenance.

EDUCATION

Savitribai Phule Pune University

Bachelor of Computer Applications (B.C.A.) — 2018 - 2021

PROJECTS

Real Estate Management System June 2025

- Engineered a robust Role-Based Access Control (RBAC) system with JWT authentication, which securely managed user permissions and access to sensitive data.
- Developed modular and reusable REST APIs using NestJS with TypeORM, which reduced development time.
- Integrated Swagger for comprehensive API documentation, enabling seamless collaboration and faster integration for frontend teams.
- Optimized complex database queries in PostgreSQL, leading to an improvement in API response time.

MySQL to Snowflake Data Migration April-2025

- Developed end-to-end data pipelines using Change Data Capture (CDC) with Python, achieving near real-time data synchronization between MySQL and Snowflake.
- Automated data ingestion and applied advanced data optimization techniques like partitioning and clustering, which significantly accelerated analytics queries.
- Integrated AWS S3 as a staging layer, ensuring secure and reliable data transfer for large-scale migrations.
- Improved analytics dashboard load times through an optimized schema design in Snowflake.

Consumer Complaint Platform Jan-2024

- Built scalable backend services with Node.js, Laravel, and CodeIgniter to handle and process daily complaint submissions.
- Implemented secure authentication and data encryption, ensuring data privacy for users and adherence to security standards.
- Integrated third-party APIs for complaint verification and improved PostgreSQL indexing, reducing data retrieval time.
- Reduced server load by implementing optimized queries and strategic caching mechanisms.

Survey Management System March-2023

- Designed and developed secure REST APIs with Node.js and MySQL to manage survey data and user submissions.
- Implemented a flexible, role-based access control system on the React frontend, enhancing system security and user experience.
- Built a dynamic survey creation module, allowing users to create customizable templates, increasing user engagement.
- Introduced caching with Redis for repeated database queries, which improved system scalability and reduced database load.

Dynamic Web Application Nov-2021

- Built dynamic form-based modules with reusable React components, which improved development efficiency and code maintainability.
- Implemented context-based state management and dynamic navigation to provide a seamless user experience.
- Designed secure, role-based routing with React Router, increasing both system security and modularity.
- Optimized frontend performance by fine-tuning rendering and reducing API calls, leading to an improvement in page load times.
