Career Objective:

Motivated and detail-oriented Network Engineer with 4+ years of experience in routing, switching, and network infrastructure management across Cisco and Juniper platforms. Seeking to leverage strong technical expertise in BGP, OSPF, and LAN/WAN design to contribute to a dynamic team focused on delivering secure, high-performance network solutions.

Professional Summary:

- Results-driven Network Engineer with 4+ years of experience in designing, configuring, and troubleshooting enterprise LAN/WAN networks.
- Proficient in routing and switching technologies with strong hands-on experience on Cisco Catalyst (2960–9500, Nexus 7K/9K) and Juniper MX platforms.
- Skilled in implementing and optimizing BGP and OSPF routing protocols, including path manipulation, route filtering, and redundancy configuration.
- Experienced in deploying VRRP, EtherChannel (LACP/PAgP), and Spanning Tree (RSTP/MSTP) for high availability and loop prevention.
- Well-versed in network services such as DHCP, DNS, NAT, SNMP, for end-to-end connectivity and monitoring.
- Adept at using tools like Wireshark for network monitoring, troubleshooting, and performance optimization..
- Excellent analytical, problem-solving, and communication skills with a focus on maintaining network uptime and reliability.

Key Skills

- **Networking:** VLANs, STP, VTP, EtherChannel, ARP, VRRP, TCP/IP, ICMP (ping)
- **Routing:** OSPF (single/multi-area), BGP (path manipulation, route filtering, MED/Local Preference, route-maps, route-reflectors)
- **Switching:** Cisco Catalyst (2960, 3560, 3750, 9200, 9300, 9500), Juniper EX/QFX series
- **Protocols & Services:** DNS, DHCP, NAT.
- **Platforms:** Cisco IOS, Junos OS
- **Tools:** Wireshark, PuTTY
- **Others:** Network Monitoring, Troubleshooting.

Professional Experience:

Cloud88Inc – Network Engineer (Jan 2022 – Present)

- Designed and maintained enterprise LAN/WAN environments using Cisco Catalyst (9300, 9500, Nexus 7k/9k) and Juniper MX series devices.
- Configured and optimized BGP policies including route filtering, Local Preference, MED, and AS-Path prepending for path manipulation and redundancy.
- Implemented OSPF multi-area design, route summarization, and authentication to enhance routing stability.
- Configured and troubleshooted VRRP for gateway redundancy and failover testing.
- Deployed and managed EtherChannels (LACP/PAgP) and Spanning Tree Protocol enhancements (RSTP).
- Integrated DNS and DHCP services for branch connectivity and seamless client onboarding.
- Performed network monitoring, packet analysis (Wireshark), and issue remediation for performance optimization.
- Coordinated with vendor teams (Cisco TAC/Juniper JTAC) for escalated troubleshooting.
- Supported network migrations, firmware upgrades, and configuration backups with zero downtime.
- Configured and maintained Route Reflectors (RRs) within the iBGP topology to minimize full-mesh peer requirements and simplify BGP management.
- Documented network topologies, change requests, and standard operating procedures.
- Implemented route filtering using route-maps, to control route advertisement and maintain routing stability.
- Performed ACL (Access Control List) configurations and reviews to ensure network security, including traffic filtering, permitting, and restricting inbound/outbound flows.
- Managed and resolved P3/P4 network tickets, including link flaps, VLAN mismatches, routing inconsistencies, and access issues within SLA timelines.

- Collaborated with cross-functional teams during planned maintenance, firmware upgrades, and topology migrations, ensuring zero business impact.

Tech Mahindra – Associate Network Engineer (Sep 2020 – Nov 2021)

- Provided L1/L2 support for Cisco Catalyst switches (2960, 3560, 3750) and basic Juniper EX-series devices.
- Configured and verified VLANs, trunking, VTP modes, and inter-VLAN routing.
- Assisted in STP topology management and troubleshooting loops/broadcast storms.
- Managed basic OSPF configurations and static routes in small-scale environments.
- Supported DNS and DHCP configurations for client environments.
- Monitored incidents via ticketing system and performed initial troubleshooting before escalation.
- Collaborated with senior engineers during planned maintenance and change implementations.
- Maintained documentation for network configurations, incident logs, and topology diagrams.
- Conducted hardware-level troubleshooting for network devices — identifying faulty SFPs, transceivers, fan modules, and line cards, and coordinating with TAC for RMA replacements
- Verified interface and hardware health using commands like show environment, show platform, and show inventory for proactive fault detection.

Education

- Master of Business Administration (MBA) with a specialization in Marketing and Digital Marketing – KL UNIVERSITY, 2019
- Bachelor of Commerce (B.COM) – ANDHRA LOYOLA COLLEGE, 2017
- Board of Intermediate (CEC) – ANDHRA LOYOLA COLLEGE, 2014
- Board of Secondary (SSC) – ST' MARYS EM HIGH SCHOOL, 2012

Certifications

- Juniper Networks Certified Associate – JNCIA-Junos

Additional Information

- Flexible to work in 24/7 environments and rotational shifts.
- Strong troubleshooting, analytical, and communication skills.
- Keen to pursue advanced certifications (Cisco CCNP/Juniper Specialist).
