- Excellent communication and interpersonal skills.
- Good team player
- Ability to grasp new technologies easily.

PROJECT DETAILS

PROJECT #1

Project Title : **SENSOR**

Team Size : 12

Team Module : Create Serial Number, SN Attribute Report and Genealogy Nest & De Nesting.

Designation : Senior Consultant Technology.

Role : UI Frontend Developer & Web Designer.

Environment : HTML, CSS, HTML5, CSS3, JavaScript, Bootstrap, Node JS and React JS.

Client : Dell.

Description: -

Generate Serial Number and PPID's for products and maintain the track of shipment and store details. To increase productivity using provided data through dashboards. Worked on project with Multiple Products where I have Integrated RESTful APIs to make dynamic and third-party libraries to enhance application functionality and user experience. Implemented CRUD operations and filters for search results and Web Accessibility, Browser Compatibility. Leveraged the React library to build a responsive and interactive user interface, enabling real-time editing and previewing of Pebble language templates. React component-based architecture facilitated modular development and seamless updates to the application. Developed a live preview feature that allows users to see immediate changes as they modify Pebble templates. This functionality includes syntax highlighting and error detection to enhance the editing experience.

Roles & Responsibilities:-

- Led a cross-functional technical team, ensuring timely delivery of sprint goals aligned with the overall project plan and Agile methodologies.
- Planned and executed quarterly deployments, conducted code reviews, and collaborated on release cycles for optimal system performance and stability.
- Designed and developed reusable React.js components, improving code maintainability and reducing development time across multiple modules.
- Engaged in direct client interactions to gather and analyze requirements, clarify user stories, and ensure product features aligned with business needs.
- I finished my assignment on time and with high quality.

PROJECT #2

Project Title : **RESOURCIT**

Team Size : 7

Team Module : Find Resource, Find Activity and Gaps & Notifications

Designation : Consultant Technology

Role : UI Frontend Developer & Web Designer

Environment : HTML, CSS, HTML5, CSS3, SASS, JavaScript, Material UI, Redux and ReactJS

Client : British Telecom (BT)

Description: -

Worked on a POC called Steel Thread and developed two modules, which we called Standard Library and ISDB. Compliance Governance Platform (CGP) helps user to build the solution/ design in a efficient and simple manner by helping in design decision making, providing a federated view of relevant IT data set, providing a incorporated view of policies, standards and controls, creating a visible mapping between standards and units of design. Standard Control Library (SCL) is a control and simulation framework that aims to provide a generic implementation of robot agnostic control algorithms for use in simulation or on real robots. It achieves robot agnostic control by specifying closed loop control tasks in operational space, which can then be projected on to the articulated body dynamics for arbitrary robots. Workflow management includes finding redundant tasks, mapping out the workflow in an ideal state, automating the process, and identifying bottlenecks or areas for improvement.

Roles & Responsibilities: -

- Creating web page with responsive which is matching wireframe.
- I have implemented all CRUD operation by calling API.
- Implementing validation rules when the user entering the form field.
- I have involved in design the webpage by create component.
- The scope of applicability the preview screen's attribute values and the user's selected value in the displayed table…

PROJECT #3

Project Title : **Vodafone Idea**

Team Size : 10

Team Module : Plans & Packs, Online Recharge

Designation : Software Developer

Role : UI Frontend Developer & Web Designer
