

AKHIL

C++ Developer

+91 79956 76398 | akhil.243m@gmail.com | Banglore

EDUCATION

B.Tech - CSE
RGM College, Nandyala
2016 - 2020

Intermediate
Sri Chaitnya jr College
2014 - 2016

SSC
Honey High School
2013 - 2014

EXPERTISE

- C/C++
- C++ OOPs
- STL
- Data Structure
- Multithreading
- MFC/VC++
- Java Script

LANGUAGE

- English
- Hindi
- Telugu

PROFESSIONAL SUMMARY

I am an experienced C++ Developer with 4 years of expertise in Application Development Skilled in handling MIME Type configurations, Luna Command Service integration, and NPAPI-based plugin implementations. Proficient in debugging and resolving system-level issues by interfacing with smart TVs using remote commands. Strong background in optimizing HbbTV plugin functionality for interactive television applications, contributed to Chromium Web browser support for WebOS.

WORK EXPERIENCE

LG Soft India
Aug 2024 - Jan 2025

Senior Research Engineer

- Developed embedded system interfaces for WebOS TVs using C++, JavaScript, and Linux, enhancing Chromium Web Browser support.
- Practical experience in maintaining GIT (version control system) and GitHub.
- Contributed to Chromium Web browser support for WebOS, focusing on MIME type to ensure accurate content recognition and rendering across various file types (HTML, JSON, CSS, multimedia formats).
- Improved performance following Agile methodologies, working with Scrum stories, participating in sprints, and utilizing tools like Jira.
- Integrated Luna Command Service with embedded WebOS APIs for improved TV control and automation.
- Enhanced the Chrome Web Browser to ensure optimal performance on WebOS-powered embedded devices.

Helson Software Solutions
Jan 2021-Aug 2024

Software Developer

- Designed and implemented UI screens using MFC frameworks and Windows GDI programming, enhancing user interaction and visual performance.
- Optimized and refactored C++ backend code to improve application efficiency and reduce processing time.
- Developed intuitive GUI applications utilizing modal and modeless dialog boxes within MFC frameworks, improving user experience and functionality.
- Collaborated within Agile/Scrum teams to troubleshoot, resolve bugs, and deliver high-quality software updates on schedule.

PROJECT 2

Project Details:-

Project Name : Chromium Web Support in webOS Environment
Client : LG Soft India Pvt Ltd
Position : Senior Research Engineer
Team Size : 10
Duration : Aug 2021 - Jan 2025
Environment: C++ 11, HTML/CSS, JavaScript, Linux, VS Code, CLI, TeraTerm, Git, Gerrit, JSON/XML.

Project Description:-

Contributed to enhancing Chromium's web browser support for WebOS, optimizing performance, and improving compatibility across WebOS-powered devices (smart TVs). Focused on integration of Chromium with WebOS-specific APIs, bug fixes, and resource management.

Roles & Responsibilities:-

- Implemented and tested critical bug fixes to improve Chromium's rendering engine on WebOS devices.
- Enhanced the containment features of the Chromium web browser to better integrate with WebOS window management and optimize system resources.
- Worked on multi-threaded optimization to enhance the performance and stability of web browsing. Controlled WebOS TVs through shell scripting over SSH to run and Chromium Web Browser.
- WebOS TVs using C++ JavaScript, and Linux shell scripting, using Chromium Web Support.

PROJECT 1

Project Details:-

Project Name : The Aladdin Enterprise Investment System
Client : Black Rock, New York
Position : Software Developer
Team Size : 12
Duration : Jan 2021 - Aug 2024
Environment:C++ 11/14, Multithreading, Win32 API, MFC, GitHub, Visual Studio 2019, Git, SqlServer 2016.

Project Description:-

The Aladdin Enterprise Investment System is a suite of products consisting of Trade ALO, Portfolio Administration, and Risk Analysis. A desktop and network-based distributed processing system, this database-driven enterprise system can be scaled to meet the needs of small hedge funds as well as major market dealers.

Roles and responsibilities:-

- Developed a C++ high-dimensional robust portfolio optimization engine with STL algorithms and data structure.
- Implemented managed C++ assembly to carry out marshalling and unmarshalling, where we need to integrate legacy C++ applications. Optimized existing code using STL data structures (Vector, List, Map).
- Developed a C++ high-dimensional robust portfolio optimization engine with STL algorithms and data structure.
- Implemented Managed C++ Assembly to carry out marshalling, where we need to integrate legacy C++ application.
