Webkul Software Pvt. Ltd.

UVdesk (https://www.uvdesk.com/en/)
UVdesk Opensource (https://github.com/uvdesk/community-skeleton)

Description: UVdesk is a powerful and customizable customer support helpdesk software designed to streamline customer service operations for businesses of all sizes. It provides both cloud-based and open-source solutions, giving companies flexibility and control over their support infrastructure. With its modular and scalable architecture, UVdesk enables organizations to manage multi-channel communications (email, website, form-builder API etc.) from a single platform. It also offers advanced **workflow automation**, **SLA management**, customized ticket assignment, and team collaboration tools, ensuring faster and more efficient resolutions.

UVdesk integrates seamlessly with various eCommerce platforms (Magento, Shopify, WooCommerce, etc.), CRMs, and third-party applications, making it especially beneficial for online businesses. Its open-source community edition allows developers to extend functionalities, customize workflows, and create tailored solutions to fit unique business requirements.

- Responsible for Frontend Development
- Responsible for Backend Development

April 2017 – June 2018
PHP Developer
Impulse Software Solution

Indoswift (https://www.indoswi.com/)

Description: Indoswift is implemented in PHP (Laravel framework). This site is made for transcription work. Here clients upload audio files. Once a file is uploaded it starts showing on the admin panel. Now admin allots the file to executives and the file gets transcribed (executives listen to the audio and make a written doc accordingly) and send it back to admin. The admin sends it to the client for approval. If everything is ok then the client sends an approval and the file work gets completed.

Technology Stack: PHP (Laravel) for backend and frontend, Html, Css, Javascript

Contribution:

- Responsible for Frontend Development
- Responsible for Backend Development
- Responsible for Webservices (API)
