PROFESSIONAL SUMMARY

- Atlassian Jira Administrator with over **7 years** of experience in managing and configuring Jira, Confluence, and Jira Service Management across Cloud, Server, and Data Center environments.
- Proficient in implementing ITSM frameworks and aligning Jira workflows to support Incident, Problem, and Change Management processes.
- Skilled in designing, customizing, and maintaining Jira workflows, field configurations, screen schemes, and permission schemes for enterprise environments.
- Experienced in executing complex Jira Cloud migrations, ensuring data accuracy, user mapping, and process continuity.
- Strong expertise in automation using ScriptRunner and Jira Automation Rules to reduce manual effort and enhance process efficiency.
- Capable of integrating Jira with CI/CD and ITSM tools such as Jenkins, GitHub, ServiceNow, and Slack for end-to-end visibility.
- Proficient in configuring SLA policies, escalation matrices, and customer request portals within Jira Service Management.
- Adept at developing governance frameworks to maintain security, compliance, and optimized license utilization in Jira environments.
- Experienced in troubleshooting performance issues, conducting health checks, and performing re-indexing for smooth instance operation.
- Hands-on with Confluence administration, creating templates, macros, and structured spaces to streamline documentation.
- Collaborated with cross-functional teams to map business processes into Jira workflows and automation rules.
- Skilled in using REST APIs and JSON to integrate Jira with external systems and automate recurring tasks.
- Managed user directories, groups, and role-based access control to ensure data confidentiality and proper access segregation.
- Experienced in plugin management, compatibility validation, and Marketplace app configuration such as JMWE, JSU, Insight, and Tempo.
- Implemented agile practices in Jira for Scrum and Kanban teams, optimizing sprint tracking, reporting, and retrospective reviews.
- Proficient in creating analytical dashboards, custom JQL filters, and SLA reports for leadership and operational insights.

- Ensured governance by maintaining audit trails, workflow documentation, and change management logs.
- Supported large-scale migrations by planning dry runs, validating configurations, and maintaining post-migration stability.
- Delivered end-user and administrator training sessions to improve adoption and operational efficiency.
- Focused on maintaining high availability, scalability, and data integrity across all Atlassian platforms.

EXPERIENCE

Adecco — Atlassian Jira Administrator | Client: Amrut Software

Feb 2025 – Jul 2025

Migration & Administration Project

- Performed end-to-end Jira Cloud migration, including discovery, assessment, and post-migration validation.
- Mapped workflows, custom fields, and permissions to cloud-compatible configurations during migration planning.
- Executed migration dry runs to identify blockers, ensuring seamless transition with minimal business disruption.
- Reconfigured automation rules, notifications, and ScriptRunner scripts to align with Cloud behavior.
- Remapped roles, groups, and permissions in Jira Cloud with strict governance standards.
- Configured service management request types, queues, and SLAs for IT and support teams.
- Integrated Jira Cloud with Jenkins and GitHub to enable continuous visibility across deployment pipelines.
- Created customized dashboards to track SLA compliance, ticket lifecycle, and backlog management.
- Collaborated with Atlassian and vendors to resolve migration-related compatibility issues.
- Performed post-migration health checks, indexing, and permission audits for stability assurance.
- Redesigned workflows and schemes to streamline ticket resolution and change processes in the cloud.
- Migrated Confluence spaces and validated page hierarchies and macros post-transition.
- Implemented post-migration automation to replicate existing manual processes and enhance productivity.

- Trained administrators and power users on updated Jira Cloud features and governance standards.
- Maintained audit documentation for migration plans, configurations, and rollback strategies.
- Optimized automation for SLA tracking, notification management, and report scheduling.
- Ensured compliance with corporate ITSM standards and data management policies post-migration.
- Monitored instance performance to detect and resolve latency or synchronization issues.
- Created process documentation and best practices for future migration activities.
- Delivered successful migration with stability, improved usability, and long-term scalability.

Accenture — Jira Administrator

Feb 2017 – Nov 2024

Project 1: Server to Data Center Migration Project

- Planned and executed Jira Server to Data Center migration, ensuring data consistency and workflow accuracy.
- Performed readiness assessment to identify plugins, customizations, and potential migration blockers.
- Coordinated infrastructure setup, node configuration, and load balancing within the Data Center environment.
- Validated workflow, permissions, and field schemes post-migration for operational reliability.
- Migrated user directories, issue data, attachments, and history logs with zero data corruption.
- Reconfigured automation rules and scripts to adapt to the clustered environment.
- Established backup and disaster recovery procedures for fault tolerance and resilience.
- Ensured plugin compatibility and optimized license management post-migration.
- Monitored replication, indexing, and cache synchronization to maintain consistent performance.
- Integrated Jira Data Center with CI/CD tools for build tracking and deployment traceability.
- Configured mail handlers, notification schemes, and SLA policies after migration completion.
- Performed health checks and applied fine-tuning for search indexing and workflow responsiveness.
- Documented migration processes, validations, and post-deployment configurations.

- Provided user training on new Data Center features and improvements.
- Delivered a stable, scalable Jira Data Center platform aligned with enterprise operational needs.

Project 2: Server & Data Center Administration Project

- Administered daily Jira and Confluence operations for Server and Data Center instances.
- Configured custom workflows, screens, and fields for IT, Operations, and Service teams.
- Implemented SLA policies, request queues, and automation for issue management efficiency.
- Managed group permissions, roles, and project-level security controls for data confidentiality.
- Performed routine upgrades, patches, and plugin compatibility checks.
- Monitored system performance and resolved indexing or mail handler issues proactively.
- Integrated Jira with Bamboo and ServiceNow to establish traceability from development to deployment.
- Created reports and dashboards to measure team performance and SLA adherence.
- Executed governance audits and ensured compliance with organizational standards.
- Automated recurring administrative tasks using ScriptRunner and native automation rules.
- Implemented backup and recovery processes aligned with organizational policies.
- Provided support for users, resolving configuration, access, and permission issues efficiently.
- Collaborated with DevOps teams for build and release synchronization via Jira integration.
- Maintained Confluence spaces, templates, and knowledge bases linked to Jira workflows.
- Ensured optimal stability and performance across multiple Atlassian environments.

EDUCATION

- BBM — Seshadripuram Academy of Business Studies | 50% | 2011–2014
- Intermediate (PCMC) — Vidhya Vardhaka Sangha | 55% | 2009–2011
