Professional Summary

Backend Developer (Node.js) with 5+ years building scalable REST APIs, event-driven and real-time systems using Node.js/Express, Kafka, BullMQ, MongoDB, Redis, AWS. Improved latency, throughput, and reliability across fintech, real estate, and health-tech. Skilled in designing microservices architecture, optimizing database performance, and ensuring high availability for mission-critical applications.

Skills

- **Core Languages & Frameworks**: Node.js, Express.js, Loopback
- **Databases & Messaging**: MongoDB, Mongoose, MySQL, Redis, BullMQ, Kafka
- **Cloud, DevOps**: AWS (EC2, S3), NGINX, Git, GitHub, Jira, SSH, Crontab, npm
- **Testing & QA**: Jest, Jasmine, ESLint & Prettier, Postman, Swagger
- **Core Strengths** : Microservices Architecture, RESTful APIs, Schema Design, System Design

Professional Experience

1) Senior Software Developer, at Mobile Programming **Mar 2025 - present**

Client: Fynd

- Built Kafka-based real-time notification system; reduced latency by **40%** and scaled for high-traffic events.
- Redesigned and optimized database schemas and API structures, resulting in **30%** faster API response times, substantially improved end-user experience.
- Authored and executed over **150** comprehensive unit and integration tests using Jest and Jasmine, increasing overall test coverage by **35%**, reducing production bugs by **50%**.

Tech: Node.js (Express), Kafka, MongoDB, Redis, Vue.js, Jest, Jasmine, Git

2) Software Development Engineer II, at Bellieve **May 2023 – Oct 2024**

- Designed and implemented a scalable luxury management platform serving over **50,000** residents, simplifying society onboarding, amenities booking, events management, and issue tracking, leading to increased resident satisfaction and engagement by **30%**.
- Integrated and optimized BullMQ for notification workflows, managing complex queuing, retries, and priority-based execution, sustaining **100,000** requests/minute efficiently on a single AWS EC2 (r8g.large) instance and reducing notification failures by **60%**.
- Optimized database performance by restructuring queries and indexing, achieving a **30%** improvement in data retrieval speed and significantly reducing system response time during peak traffic periods.

Tech: Node.js (Express), BullMQ, MongoDB, Redis, Git, AWS EC2

3) Software Development Engineer I, at Fitternity **Aug 2021 – Sept 2022**

- Engineered high-performance REST APIs using Express, improving backend response times by **25%** and increasing the system's ability to handle concurrent requests, leading to improved user experience and stability.
- Developed and implemented **10+** automated marketing update modules, cutting turnaround time by **40%**, enabling rapid and agile marketing campaigns and directly contributing to increased customer engagement.
- Worked alongside marketing and product teams, proactively identifying frequent update requirements and translating them into reusable modules, improved operational efficiency and cross-team collaboration by **30%**.

Tech: Node.js (Express), MongoDB, Redis, Git

4) Software Development Engineer, at Valuefy Technologies **Jan 2019 – Mar 2021**

- Developed **Model Portfolio** investment module for **Kotak Cherry**, enhancing investment recommendation accuracy and customer trust, resulting in positive client feedback and an estimated increase in user engagement by **20%**.
- Collaborated on fintech and wealth management solutions, strengthening platform reliability and client trust.

Tech: Node.js(Loopback), MySQL, Git

Education

Veermata Jijabai Technology Institute, Mumbai - MCA **Aug 2016– May 2019**
