Sanjay M S

Data Engineer

Experience Summary

- **5.5 years of IT experience**, with **4.5 years in Data Engineering**, designing and delivering **scalable, distributed data platforms** on **AWS and Azure**.
- Expertise in **Big Data frameworks (Spark, PySpark, Hadoop, Kafka)**, **cloud-native data services (AWS Glue, EMR, Redshift, Athena, S3, Azure ADF, Databricks, Synapse)**, and **data governance**.
- Proven track record in **building reusable frameworks, automating workflows, implementing CI/CD pipelines**, and delivering high-quality data for analytics and BI platforms.
- Strong exposure to **real-time streaming, serverless architectures (Lambda, Step Functions)**, and **microservices-oriented data solutions**.
- Experienced in **mentoring teams, conducting code/design reviews**, and ensuring **data quality, lineage, and compliance**.

Technical Skills

Big Data & Streaming: PySpark, Spark SQL, Kafka, Hadoop, Snowflake.
Cloud Platforms:
AWS: Glue, EMR, Redshift, Athena, S3, Lambda, Step Functions, CloudWatch, RDS
Azure: Data Factory, ADLS Gen2, Databricks, Synapse, Azure SQL, Monitor
Data Warehousing & Databases: Redshift, Snowflake (learning), MySQL, PostgreSQL, Oracle, Azure SQL DB
Workflow & CI/CD: Airflow, Control-M, GitLab, Bitbucket, Terraform
Reporting & BI: Power BI, Tableau, Qlik Sense
Languages & Scripting: Python, SQL, Shell
Other: Data Modeling, Governance, Data Quality, Performance Tuning

Experience 1

Data Engineer

Apr '21 - Sep '25

BrightCanyon Solutions Pvt, Ltd

Bengaluru

Projects

Data Engineer

Apr '21 - Sep '25

BrightCanyon Solutions India Pvt Ltd

Project 1: **Royal Bank of Scotland (RBS)**
Duration: Sep 2021 – March 2023
AWS Glue, Amazon EMR (PySpark, Python, SQL), Amazon S3, Amazon Redshift, Amazon RDS, Amazon QuickSight, Amazon CloudWatch

- **Designed and built scalable ETL pipelines** using **AWS Glue** and **EMR** to migrate on-premises data into **Amazon S3** and **Redshift**, enabling seamless cloud adoption and analytics modernization.
- **Optimized PySpark transformations** on EMR with **partitioning, bucketing, and compression**, reducing data processing times by ~30%.
- **Automated workflows** using AWS Glue triggers, Step Functions, and **CloudWatch alerts**, cutting manual intervention by 40% and improving SLA adherence.
- **Implemented data quality and auditing frameworks** with reconciliation checks across Glue and EMR pipelines, achieving **99.5%+ data accuracy**.
- **Developed reusable ingestion templates and parameterized Glue jobs** to standardize data integration across multiple data domains.
- **Designed Redshift schemas** with optimized **distribution styles, sort keys, and compression**, improving BI query response times significantly.
- Leveraged **Redshift Spectrum** and **Athena** for ad-hoc querying on S3 data, **accelerating business decision-making** and reducing dependency on heavy ETL.
- **Collaborated with cross-functional stakeholders** to align data pipelines with scalable and maintainable data models.
- **Mentored junior engineers** on PySpark best practices and AWS data services (Glue, EMR, S3, Redshift).

Project 2: **Novartis**
Duration: June 2023 - Present
Azure Data Factory (ADF), Azure Databricks (PySpark, Python, SQL), ADLS Gen2, Synapse Analytics, Azure SQL, Power BI, Delta Lake, Unity Catalog, Auto Loader, Delta Live Tables, Azure Monitor

- **Architected end-to-end ingestion pipelines** from **SAP, REST APIs, and flat files** into **Azure Data Lake Storage Gen2** using **Azure Data Factory**, implementing a **Bronze–Silver–Gold lakehouse architecture** to ensure data quality, traceability, and scalability.
- **Developed complex transformation logic** in **Databricks (PySpark)** to apply **business rules, SCD Type 1 & 2 handling**, and data standardization, ensuring historical accuracy and consistency across domains.

- **Implemented real-time and incremental ingestion** using **Databricks Auto Loader** with schema evolution support and checkpointing, improving ingestion efficiency and minimizing manual intervention.
- **Built curated Delta tables** in Databricks and **optimized loading into Synapse Analytics** and **Azure SQL** using partitioning, Z-Ordering, and compression, reducing data load time by **30%**.
- **Designed and deployed Delta Live Tables (DLT) pipelines** to enable declarative, reliable data transformations with built-in monitoring and quality expectations, improving pipeline maintainability.
- **Integrated Unity Catalog** for centralized governance, data lineage tracking, fine-grained access control, and audit logging across data lake layers, strengthening compliance and security posture.
- **Implemented monitoring and alerting** using **Azure Monitor, Log Analytics, and ADF activity logs**, improving operational visibility and **reducing issue detection time significantly**.
- **Delivered curated datasets and Power BI dashboards** by exposing data through Synapse serverless SQL pools and Delta tables, enabling fast, self-service analytics for business teams.
- **Performed performance tuning and reconciliation checks** across ADF and Databricks pipelines, maintaining **99%+ data accuracy** and ensuring SLA adherence.
- **Leveraged Alteryx Designer** for quick data cleansing and preparation of SAP extracts before ingestion into ADLS, accelerating onboarding of complex data sources.
- **Contributed to data governance initiatives** by cataloging datasets in **Unity Catalog**, enforcing quality rules using Delta constraints and expectations, and implementing end-to-end lineage tracking.

Experience 2

Associate Software Engineer Apr '20 - Mar '21

BrightCanyon Solutions Pvt, Ltd Bengaluru

Education

Diploma – Electronics and Communication Mar '17 - May '20

B.G.S Polytechnic Bengaluru

Bachelor of Engineering – Electronics and Communication Dec '20 - May '23

M S Ramaiah Institute Of Technology Bengaluru
