SUMMARY

Experienced Software Developer adept at crafting cutting-edge applications utilising Angular, React, and Node.js, and proficient in driving task automation through innovative frontend solutions. Profound expertise spanning over 6+ years in software development, coupled with a strong command of Angular, React, and Node.js, along with a proven track record in leadership and team management.

PROFESSIONAL EXPERIENCE

Senior Software Engineer, *Percient Inc LTD* 01/2025 – present
Mumbai

- **Enhanced user experience** by developing and integrating new features, refining existing application functionalities, and ensuring responsive, accessible designs using **Angular 18** and **TypeScript**.
- **Translated business requirements** into scalable, maintainable, and performant solutions by leveraging **MVC frameworks** and industry best practices.
- **Conducted comprehensive testing** across multiple environments and the latest system/software versions, ensuring application stability, reliability, and seamless performance.
- **Researched, evaluated, and adopted** emerging technologies, frameworks, and tools to streamline development workflows and accelerate release cycles.
- **Collaborated in code reviews** to enforce coding standards, identify optimization opportunities, and promote team-wide knowledge sharing and continuous improvement.

System Analyst, *Speridian Technologies* 02/2020 – 12/2024
Mumbai

- **Enhanced user experience** by developing dynamic and responsive single-page applications (SPAs) using **Angular** and component-based UIs with **React**.
- Gained deep insight into project specifications to **architect robust and scalable full-stack applications**, utilizing front-end within the MVC pattern and **Node.js** for building efficient back-end services and APIs using **MySQL, GraphQL and MongoDB**.
- Conducted thorough **cross-browser and version testing** on the latest iterations of **Next.js**, and Node.js, implementing necessary adjustments and refactors to ensure compatibility and peak performance.
- Consistently explored and integrated **novel technologies and frameworks**, leveraging **Next.js** for server-side rendering (SSR) to optimize development efficiency and improve application SEO and load times.
- Actively **participated in code reviews** for both front-end and back-end (**Node.js**) codebases to enforce best practices, maintain high code quality, and facilitate knowledge sharing across the development team.

Software Developer, *Airrchip PVT LTD* 12/2018 – 12/2019
Mumbai

- **Architected and designed the full-stack structure** of software applications, selecting **Angular 7/8** for the dynamic front-end, **Node.js** for the scalable back-end runtime, and **MySQL** managed via **Sequelize ORM** as the persistent data layer.
- **Developed clean, efficient, and maintainable code** across the entire stack, building responsive user interfaces and implementing robust server-side logic, RESTful APIs, and database interactions using **Node.js** and **Sequelize**.
- **Identified and resolved performance bottlenecks** through query optimization in **MySQL**, efficient data loading strategies in **Sequelize**, and front-end to ensure optimal application speed and efficiency.
- **Integrated critical security measures** throughout the development lifecycle, safeguarding **Node.js** APIs, implementing secure data access layers with **Sequelize**, and protecting the **MySQL** database against common vulnerabilities like SQL injection and data breaches.

EDUCATION

Bachelor of Engineering, Electronic and Telecommunication, 2015 – 2018
University of Mumbai Mumbai

TECHNICAL SKILLS

Agile
JIRA
Javascript
CSS
REACT JS
Mongo DB
GraphQL
MYSQL
HTML
Typescript
NODE JS
ANGULAR
Docker

ACHIEVEMENTS

Spot Award
Handle major task to complete project within time frame.

PROJECTS

SafeTower Hospitals and Health Care, *USA* 01/2025 – present
SafeTower is a health and safety compliance platform that helps hospitals manage infrastructure risks, inspections, and regulatory reporting. It enables real-time monitoring, automated alerts, and ensures adherence to health and safety standards.

- Developed dynamic, scalable UI components using React + Hook and TypeScript to enhance performance and modularity.
- Integrated RESTful APIs to fetch and display real-time tower safety and inspection data.
- Designed and implemented a responsive layout to support both desktop and mobile devices for on-site technicians.

- Collaborated with QA and backend teams in an Agile environment to ensure smooth delivery and quality assurance.

Neom, *Suadi Arabia* 06/2023 – 12/2024

Neom is a new urban area planned by the Kingdom of Saudi Arabia to be built in its northwestern Tabuk Province. The site is north of the Red Sea, east of Egypt, across the Gulf of Aqaba and south of Jordan. The total planned area of Neom is 26,500 km^2.

- Implemented the Place, Event, Media page to show all sites.
- Created Media, User, Event and Place's CRUD API using Strapi CMS with **GraphQL**.
- Integrated Docker to containerise the application for consistent development, deployment, and scalability across environments.
- Having dynamic controls UI Creation. Technology Used: React JS, Redux, React JS With Hooks, React JS + Material UI + Ant Design

Satellite Healthcare Inc, *USA* 12/2023 – 05/2023

Satellite Healthcare, Inc. is a non-profit, physician-led organisation founded in 1973 and headquartered in San Jose, California . It specialises in providing high-quality, patient-centred kidney care, including in-centre and home dialysis.

- Re-architecture of the old portal using React JS + Hooks.
- Created common components and reused them on multiple pages.
- Having dynamic controls UI Creation. Technology Used: React JS, Redux, React JS With Hooks, React JS + Material UI + Ant Design

Reliance, *India* 09/2022 – 12/2022

The system interacts with Case Management System (CMS) to get an allocation and basic details of customers, addresses, loan account number details, and allocation details. And it sends transaction data to Loan Management System (LMS) so that the operation can act on them and can settle entries in the core system.

- Re-architecture of the old portal using Angular.
- Created common components and reused them on multiple pages.
- Having dynamic controls UI Creation.

SunWest Mortgage, *USA* 07/2022 – 08/2022

SunWest mortgage is a mortgage finance services company licensed to originate mortgage loans in 9 states across the United States.

- Re-architecture of the old portal using ReactJS +Hooks.
- Created common components and reused them on multiple pages.
- Having dynamic controls UI Creation.
- Making Lambda function.

Child Support Re-architecture, *USA* 05/2020 – 07/2020

Child Support Enforcement system was designed to help governing institutions have a system to track, estimate the Support process. This was earlier developed in Life ray and is now being developed in ReactJS. The online application supports end to end Child Support Enforcement process that has the following modules.

- Re-architecture of the old portal using ReactJS + Hooks.
- Created common components and reused them on multiple pages.
- Integrated Multi-lingual support.
- Having dynamic controls UI Creation.

Husqvarna Field Service, *USA* 02/2020 – 04/2020

Husqvarna requires a mobile-enabled solution for field technicians (installers) in the field. The solution should enable installers to view and update their schedule and capture updates to their jobs. The tool should provide a way to view and update installation jobs, schedules, product lists, customer information, order information, signature capture, email notifications, etc.

- Integrated Signature feature and Pdf feature .
- Integrated Recaptcha feature.
- Designed and developed a web application using Angular (version 8) where admin assigned a task against a technician and technician do his job and take the digital signature of the customer and generate soft copy or pdf where he mentioned his work and print customer signature along with his signature.

PixICFS, *India* 10/2019 – 12/2019

PixICFS is a customer feedback solution web application. In this web application, customers create is their campaign base on service given by the organization and make their own survey regarding their experience about a service given by the organization. One survey has multiple questions which are created by customers. customer also suggest their opinion and raise questions base on their experience. Admin accepts their question or survey.

- Implemented User creation, Update, and Deletion part, Hide and show pages base on the role using angular stack.
- Integrated Multi-language feature.
- Integrated authentication API with client API using Node JS.
- Created Role base API, User API, and integrated crypto JS encryption.

MTRANS, *India* 07/2019 – 09/2019

Mtrans is the project of Logistics Management Solution. In this web application, the Organization or customer creates their consignment and select their location name where they want to deliver their consignment. They also check available truck driver status, create a new truck driver, and assign their consignment to an available truck driver.

- Integrated SMTP mail and SMS feature using NodeJS.
- Handled two databases using Sequelize.
- Integrated Multi-language support.
- Created User, Role, Dashboard page, implemented encryption, integrated google map.

Digital Banking, *India* 01/2019 – 05/2019

Digital Banking Customer Engagement Platform is B2B User Onboarding Development. this is a banking project and handles a transaction of customer and show package according to their expenditures.

- Integrated API with third party API to get transaction details.
- Designed and developed a dashboard page with different types of charts.
- Integrated encryption for security.
- Created API to handle transaction detail and checked new transaction every 5 min using Node Cron Library.
