SUMMARY

Data Engineer with 4 years of experience in designing and managing scalable **ETL/ELT data pipelines** using **AWS, Azure**, and **GCP**

●Proficient in **Big Data tools** like **Spark, Hive, Snowflake**, and experienced with large-scale data processing.

● Expertise in **data ingestion**, **migration**, and **performance tuning**.

●Experienced with **Apache Airflow** and **AWS Glue** for orchestration, with skills in **data quality checks**, **schema validations**, and **monitoring frameworks**.

EDUCATION

Masters of Computer Application , Usha Martin University, Ranchi — Jul '20 — Jun '22, Ranchi, India

Bachelors In Computer Application, Birla Institute of Technology, Mesra, Ranchi — Jul '17 — Jun '20, Ranchi , India

PROJECTS

Data Engineer – RetailEdge360, Tata consultancy services — Jan '25 — Present

- Built scalable ETL pipelines using AWS Glue and PySpark to process retail data, with Airflow orchestration and data delivery to Redshift for analytics.
- Designed ETL pipelines using AWS Glue (PySpark) to ingest and transform data from POS, CRM, and website logs, and load it into Amazon Redshift.
- Implemented data cleansing logic, including null value handling, duplicate removal, and column-level validations to ensure high data quality
- Stored intermediate and processed data in Amazon S3 and optimized jobs to reduce runtime by 30% using partitioning and parallelism in Spark
- Utilized Databricks notebooks to prototype and validate Spark-based transformations and performance tuning before production deployment
- Integrated Snowflake for advanced data storage and transformation workflows using Snowpark APIs
- Built ETL pipelines using informatica for data integration

Data Engineer – DataStreamX, Tata consultancy services — Nov '21 — Dec '24

- Built 20+ reusable ingestion pipelines processing 500+ GB/day using AWS Glue, Spark, and DBT, enabling faster onboarding.
- Migrated on-prem Hive data to Snowflake using Snowpipe and external tables with robust validation checks
- Ensured 99.8% pipeline reliability with Airflow orchestration, using retries, SLA monitoring, and metadata logging
- Handled diverse data formats: structured, semi-structured (JSON, XML), and unstructured data via Delta Lake.
- Used Databricks notebooks to rapidly prototype data workflows, perform exploratory analysis, and benchmark Spark transformations.
- Integrated data lake using Hadoop HDFS with Hive external tables for legacy batch workflows and built Azure Data Factory pipelines to ingest third-party data into Snowflake for unified reporting.

SKILLS

Programming Languages Python, SQL
Big Data Technologies Hadoop, Hive, Spark, MapReduce, Snowflake, snowpark, Amazon S3
Cloud Services Google Cloud Platform(GCS, Dataproc, BigQuery)
Databases MySQL, SQL Server, Oracle
ETL/Orchestration Apache Airflow, AWS Glue, Informatica
