Jayajit Mohapatro

Address: - B201, Ecolife Developer, EON Bhoomi Block, Balagere Road, Varthur, Bangalore – 560087, Karnataka.

Email: jayajit2020@gmail.com

Cell No.: 91-9036024022

Objective:

Seeking a position where my demonstrated achievements in academics, leadership, teamwork and technology combined with experiences will provide exceptional value to the organization.

Experience Summary:

- I have a total of around 14 years in Java along with 18 years industry experience.
- I am currently associated with **Mindtree Pvt Ltd**, Bangalore as **Technical Lead** and I am working with this organization for last 4+ **years** (Aug 2021 till date)
- I was working with **Ascendum Pvt Ltd**, Bangalore as **Team Lead** and I had worked with this organization for last 1.5 **years** (Jan 2020 till July 2021)
- I was working with **Accenture Services Pvt Ltd**, Bangalore as **Development Team Lead** and I am working with this organization since last **3+ years** (July 2016 till Dec 2019)
- I worked with **Unisys Global Services India**, Bangalore a as **Senior Software Engineer** for **4.2 years** (May 2012 till July 2016)
- I worked with **Logica Pvt Ltd**, Bangalore (A Subsidiary of Samsung India Electronics Ltd.) as **Software Engineer** for **3.7 years** (Nov 2008 to May 2012)
- I worked with **Keane India Pvt. Ltd**., Bangalore as **Senior Software Engineer** for **1.8 years** (Jan 2007 to Nov 2008)
- I have onsite experience of 2yr in France with work permit during my tenure in Logica.
- I am SCJP certified Java 1.5 developer.

Synopsis

- Ability to work efficiently in teams, organize, coordinate activities and motivate others through leadership and a positive outlook
- Good interpersonal, oral and written communication skills, strong Analytical Skills and an urge to learn new technologies to meet the challenging environment
- Over 18 years of experience in developing **web and client/server applications** using **Java/J2EE** and **SCALA** technologies
- Strong Programming skill in **Core Java, Angular, J2EE, JDBC, XML, Web Services (SOAP AND REST), scala, liferay portal, groovy, akka, play framework and cloud computing and Spring Boot and Spring Micro Services, angular**
- I have worked in standard waterfall as well as **agile** software engineering methodology environments**.**
- I have set up System Centre Lab along with Azure pack and hyper-v for Microsoft Cloud OS.
- Experience in working on DevOps using Jenkin, JIRA, Sonarqube, Unix, Ansible scripting, SVN, Git.
- I am having experience of spring boot, spring microservices.

Technical Summary

Java Skills :
Core Java 8/17/21, J2EE (Servlets, JSP and tiles etc.), Web Services, Java RMI, Spring Boot, Spring MicroServices, Spring Batch Processing, XML, JavaScript, JDBC, SOAP, Rest API and Java Performance Testing using Jmeter, GRPC, spanner, pub/sub

UI Skills:

Angular, JQuery, JavaScript

SCALA Skills:

Scala, Akka, Play framework

Frameworks
Spring, Spring Boot, Spring boot Micro Services, Spring batch, Akka, Play, WSO2, Liferay, Struts, Validation, Axis, JUnit, Log4J and Plug-in Development, kafka, Kubernetes, helm, docker, play framework, angular

Web/Application Servers
Apache Tomcat, JBoss

Other Tools
ANT, VSS, Perforce, Maven, Gradle, CVS, VSS, SVN, GIT and POI, PUBSUB, KAFKA, Kubernetes, Helm, docker, DevOps

Operating Systems
Unix, windows

Cloud Computing Skills

GCP, Microsoft Azure, Azure pack for System Centre SCVMM, Hyper-V, PowerShell and Shell Scripting, IaaS

Additional Languages

HTML and CSS

Databases
Oracle 11g, MySQL, SQL Server, Google spanner

Qualifications

BTech: 72%, Year of passing - 2005, Board/University: JITM, Berhampur

12th: 59%, Year of passing - 2000, Board/University: CHSE

10th: 84%, Year of passing - 1998, Board/University: HSC

Professional Experience Details

Mindtree: Banking and Finance (Equifax) **Dec 2023 – Till now**

Project Description:

It is one Banking and Finance domain, where it implements the credit score for the customer. Here the Customer like banks will provide information in term of files and we need to parse them to generate the credit scores of individuals which banks will use for their loan processing. The files with millions of record process to database with optimize way.

Role Description:

- Design file processing technologies as billion of records will be read through server.
- Implementing parsing and storing and manipulation techniques.
- Involved in implementing above modules using spring microservices.
- Involved in Spring batch implementation along with oracle db design to store data.
- Involved in supporting client devOps team.
- Involved in developing angular UI.

Mindtree: Travel and Hospitality (Sabre Holding) **Aug. 2021 – Dec 2023**

Project Description:

It is one Travel and hospitality project, where it is implemented for travel ticketing and its dispense to the agency. It has the module to handle admin activities as well as the normal agency request through GUI and Mainframe. Also storing, managing and dispensing tickets are handled through the application. Basically, this application is to offload all mainframe screens to open source where there are many modules present but for us, it is to dispense tickets as per request and maintain the invoicing module along with the dispensed ticket. Also used GCP to manage application.

Role Description:

- Design admin modules and the dispensing module along with invoice.
- Designing admin module so that the admin can have view, edit and delete activity.
- Involved in implementing above modules using spring microservices.
- Involved in pubsub implementation along with spanner db design to store data.
- Involved in working with client devOps team by implementing dockers, Kubernetes and helm.
- Involved in implementing gcp modules along with gcp cloud and spanner.
- Involved in supporting client devOps team.

Ascendum: E-Commerce **Sep. 2020 – Jul 2021**

Project Description:

It is one E-commerce project, where it is implemented for store management and device management of the stores. It has the module to handle store details and its installed device details. Also scanning of products and displaying details to users with user specific languages. Once user will weigh the product he can proceed with payment and can give feedback. So overall it is an e-commerce project to handle day to day products of customer with automated weighing machines and payment in store.

Role Description:

- Design Store and Device management modules.
- Designing language module for all stores and devices and for customers.
- Involved in implementing above modules using spring microservices.
- Involved in Kafka implementation to get product details to DB uploaded by xls sheet.
- Involved in working with client devOps team by implementing dockers, Kubernetes and helm.
- Involved in implementing scala program along with Akka to manipulate data.

Ascendum: TOYOTA **Jan. 2020 – Jul 2021**

Project Description:

Project is based on used cars, Where by using the app dealer will create enquiries based on seller or buyers. Also dealer can do valuation, procurement and refurbishment of vehicles. After which it make vehicle available in stocks. So that SO can create enquiry for the vehicles to sell them to buyers. It involve various modules like seller enquiry, valuation, negotiation, procurement, refurbishment, stock and buyer enquiry along with certification of Tayota vehicles.

I am involved in developing project with Java, Scala, Akka, Spring Boot, play framework, Spring MicroServices. Along with Azure integration and with kafka, Kubernetes, helm and docker.

Role Description:

- Designing Procurement and Certification modules.
- Implementing end to end of modules.
- Involved in coordinating different modules of project.
- Deployment of project in unix environment.
- Analysing production defects and solving them.
- Used Spring Boot and Spring microservices for all modules.
- Working as DevOps team to resolve project defects.
- Involved in writing Java and Scala code and helping team on the same.
- Implemented kafka code.
- Implemented Scala along with play framework and Akka for data insertions.

Accenture: FORD **July. 2016 – Dec, 2019**

Project Description:

Project is based on connected vehicles. Where it is taking care of vehicle health like low tire pressure, remote management, vehicle authentication, Value charge profile, battery health, efficiency management, trip calculation and also takes care of sending notification to driver as well as admin of the vehicle on requirement basis. There are many other modules like Alexa communication and SDTV of Amazon to vehicle etc etc.

I am involved in developing scala based projects like FTCP, Alexa integration and SDTV module. Used scala, akka and play framework to develop these projects. Involved in performance development of each project in FORD, which is developed on scala script, akka and play framework. Involved in deploying these scala projects in unix server using ansible scripts.

Role Description:

- Designing new modules like Alexa, CAP and SDTV using scala, akka and play framework.
- Implementing performance development for the modules using scala, akka and play framework.
- Involved in coordinating different modules of project.
- Deployment of project in unix environment.
- Analysing production defects and solving them.
- We started implementing Spring Boot and Spring microservices for all modules.
- Working as DevOps team to resolve project defects.
- Involved in writing Java and Scala code and helping team on the same.

Unisys: Choreographer - Unisys Secure Private Cloud **May. 2012 – July 2016**

Project Description:

The main responsibility of the Unisys cloud SPC (Choreographer) is to deliver services to the business. With the proliferation of cloud computing (both private and public) and the fact that IT departments must also deliver services via traditional, in-house methods, the newest catch-phrase has become "hybrid cloud computing." Hybrid cloud is also called hybrid delivery by the major vendors including HP, IBM, Oracle and VMware who offer technology to manage the complexity in managing the performance, security and privacy concerns that results from the mixed delivery methods of IT services.

As a Lead, my responsibility was to integrate Choreographer with various Cloud Platforms in order to provide cloud manageability from Chorographer single glass of pane. I have added Hybrid cloud features by providing support to Microsoft Cloud OS and made chirographer to manage Cloud infrastructure on Microsoft Azure (Public cloud) and Azure Pack (to Manage Private cloud). Azure pack is to manage resources on Hyper-V (VMM) with Microsoft System center 2012 (SCVMM). I have also setup up a System Center Lab for the same along with SCVMM logical networking, PowerShell and Shell Scripting and Network virtualization.

I have worked on Microsoft Service Management API to integrate Choreographer Java code with Microsoft Cloud OS.

I have also worked on Open source Dasein framework to provide support for multiple cloud platforms such as AWS, VCenter and Azure.

Role Description:

- Performing Lead role
- Scrum Master for the Team
- Performing Hiring Manager role for organisation.
- Setting up System centre, Hyper-V and Azure Pack Lab environment.
- Integration with Microsoft Azure and Azure Pack
- Requirement gathering from client and requirement analysis.
- Analysis of existing solution.
- Preparation of HLD and DLD for all modules
- Implementation of web-services model
- Used JUnit for writing Unit test cases
- Branching in SVN for all new development works and Jenkins Builds.
- Providing KT to the Team and mentoring the junior resources.
- Preparing KT documents for knowledge Data base
- Driving weekly status meetings.
- Encourage logic and creativity to analyse problems and identify possible solutions.
- Encourage and motivate the team to make job specific decisions.
- Preparation and presenting status in forms for various reports to senior management and client
- Configured Eclipse Juno for the team and installed the Perforce plug-in to manage the code repository for the project.
- Code review with eclipse plug-in provided by Perforce
- Handled most of the critical technical issues like Performance and Concurrent issues in the project.
- Goal setting
- Solving bugzilla incident with in specified SLA.

LOGICA: VNAB-eABs **Feb. 2012 – May 2012**

Project Description:

This project involved in devloping VNAB application. It is basically one dutch government application but also devloped for other language. VNAB is basically an insurance management application. It takes care of involvment of inside insurer as well as outside country insurer who are willing to invest money under NetherLand government. This application is developed by taking care of VNAB, nonVNAB and Pool concepts.

Role Description:

- Involved in developing UI using JSF and also involved in webservice modules creation.
- Involved in making design for the product.
- Actively involved in development/review of test cases for the current integration
-

LOGICA: LAPSHV **Nov. 2011 – Feb 2012**

Project Description:

This is one of the products for banking developed by Logica. Where it involves banking transactions, supervising various transactions dealt in banks, creating reports for bank. It also takes care of maintaining different files of each transaction made by banking operations. It involves monitoring and scheduling banking transactions.

Role Description:

- Involved in doing POC for GWT framework for this product.
- Involved in making design for the product.
- Actively involved in development/review of test cases for the current integration

LOGICA: CARM **Dec. 2009 - Nov 2011**

Project Description:

This project involved in developing frame work for Industrial application. It is a worldwide application and developed in many languages. This project maintains user creation of internal and external to Airliquide. Also implements services, manages and implements workflows, Implementing AD agents, and managing policies.

Role Description:

- Worked in Onsite with French resource and also coordinated with India development.
- Involved in making design for the product.
- Actively involved in development/review of test cases for the current integration

LOGICA: Livelink **Dec. 2009 - Nov 2011**

Project Description:

This project involved in supporting Airliquide customers and developers with functional requirements and customization of framework. The application supports fulfilling industrial requirement throughout Europe, USA, UAE and China.

Role Description:

- Worked in Onsite with French resource and also coordinated with India development.
- Involved in making design for the product.
- Actively involved in development/review of test cases for the current integration

LOGICA: SIV **Nov. 2008 - Dec 2009**

Project Description:

This project involved in developing frame work for Content Management System. It is basically French application but also developed for English and Spanish language. This project maintains contents or data provided by users or contributors or responsible of publications. The data is showed on internet basing on various state of document as well as the authorization of the contents.

Role Description:

- Worked in Onsite with French resource and also coordinated with India development.
- Involved in making design for the product.
- Actively involved in development/review of test cases for the current integration
- Application design and build.
- Driving daily status meetings.
- Encourage logic and creativity to analyze problems and identify possible solutions.
- Encourage and motivate the team to make job specific decisions.
- Participate in walkthrough sessions

CARITOR:PHS-HSM **Jan 2008 - Nov. 2008**

Project Description:

This project involved in supporting Airliquide customers and developers with functional requirements and customization of framework. The application supports fulfilling industrial requirement throughout Europe, USA, UAE and China.

Role Description:

- Involved in High level designing of PHS-HSM modules.
- Involved in making design for the product.
- Actively involved in development/review of test cases for the current integration

CARITOR:HMM Re-Architecture **Jan. 2007 - Dec 2007**

Project Description:

This project involved the rebuilding of the existing HMM application. HMM is basically a healthcare management application. Horizon Meds Manager is an integrated pharmacy information system that uses the power of technology to provide a single-system solution. Horizon Meds Manager provides patient support in all environments including inpatient, outpatient, emergency room, recurring chemo patient, short stay, clinic outpatients, employee medications, discharge medications, pass medications, and retail medications.

Role Description:

- Contributing to the design by providing inputs on the functionalities of the existing products.
- Involved in making design for the product.
- Actively involved in development/review of test cases for the current integration
