CAREER OBJECTIVE

As a **Data Engineer** with over 5 years of experience in Big Data ecosystems and MS Azure Cloud Services, I bring a strong background in designing and executing solutions for complex business problems. My expertise lies in building large-scale reporting solutions, predictive analytics, and architecting robust data pipelines that empower organizations to harness the full potential of their data assets.

PROFILE SUMMARY

- 5+ years of IT experience across multiple industries with hands-on expertise in **Big Data Analytics and Development**.
- Skilled **Azure Data Engineer** with experience in designing and developing scalable data solutions using **Azure Databricks, PySpark, and Azure Data Factory**.
- Strong expertise in building data-driven workflows for efficient data movement and transformation within ETL processes.
- Proficient in implementing complex business logic using **Databricks, PySpark, and Spark SQL** to deliver actionable insights.
- Experience in handling structured and unstructured datasets in formats like **Text, CSV, XML, JSON, Parquet, and Avro**.
- Knowledge of agile methodologies, including **Extreme Programming, Test-Driven Development, and Agile Scrum**.
- Familiar with **GIT** for Source Control Management.
- A strong communicator, collaborative team player, and passionate learner of new technologies.

TECHNICAL EXPERTISE

MS Cloud Services / Big Data Technologies
Azure Databricks | Azure Data Factory | Azure SQL Data Warehouse | Azure Delta Lake | Azure Synapse Analytics | Apache Spark

Programming Languages
Python | Scala

Database & Query Languages
SQL | Spark SQL | PL/SQL

PROFESSIONAL EXPERIENCE

Capgemini — *August 2020 to Present*
Role: Azure Data Engineer

EDUCATIONAL QUALIFICATION

Bachelor of Engineering (B.E.) in **Electronics and Communication Engineering (ECE)** – JNTUA

PROJECTS SUMMARY

Project #1: Central Data Ingestion Hub
Environment: Apache Spark, Python, ADF, Databricks, Delta Lake, SQL Server, Azure Functions, And Logic Apps

- Designed & implemented **ADF pipelines** for ingesting data from RDBMS (Oracle, SQL Server, and DB2), cloud sources, and various file formats (CSV, JSON, XML).
- Built scalable transformation workflows in **Azure Databricks (PySpark)** for Bronze → Silver → Gold architecture.
- Implemented incremental & batch ingestion strategies for performance optimization.
- Ensured data quality, schema validation, and error handling with logging frameworks.
- Optimized queries in **Azure Synapse Analytics** using partitioning, indexing, and distribution techniques.
- Secured data access via **Azure Key Vault & Unity CatLog** (table/row/column-level permissions).
- Collaborated with business teams to align pipelines with **Power BI** reporting needs.

Project #2: Verizon – Data Ingestion & Analytics Modernization
Environment: Apache Spark, Python, ADF, Databricks, Delta Lake, SQL Server, And Synapse Analytics

- Migrated and modernized Verizon's on-premises data systems into Azure Cloud.
- Designed scalable ingestion pipelines and standardized transformations.
- Enabled both **real-time and batch analytics** for operational and business reporting.

Project #3: GOMT – Data Processing & Migration
Environment: Apache Spark, Hive, HDFS, Sqoop, SQL, And UNIX

- Managed large-scale on-premises data using the Hadoop ecosystem.
- Developed & optimized **ETL workflows** using Spark, Hive, and Sqoop on HDFS.
- Automated ingestion & scheduling with UNIX shell scripting.
- Prepared the environment for migration to a cloud-based architecture.

DECLARATION

I hereby declare that the above details are true and correct to the best of my knowledge.
