SUMMARY

- Dynamic Data Engineer with **4 years of experience** in building **scalable data pipelines and optimizing ETL workflows.**
- Skilled in **Python, Machine Learning, and Data Science techniques** for solving complex business problems.
- Proficient in **Snowflake, AWS, and API development using FastAPI**.
- Proven ability to deliver actionable insights and impactful data visualizations.
- Strong track record in designing and deploying high-quality data solutions that drive business outcomes.

SKILLS

- **Programming:** Python**, Pyspark.**
- **Cloud Platforms: AWS** (S3, **Glue**, **Redshift**), **Snowflake.**
- **Databases:** PostgreSQL, **MySQL**, **MongoDB.**
- **DevOps: CI/CD**, Git.
- **Data Engineering: ETL/ELT pipelines**, Data modeling, DAG, **Airflow**.
- **Soft Skills: Problem-solving, Agile collaboration, technical communication.**
- **Visualization:** Tableau

EDUCATION

Master Of Science in Computer Science May 2020
Cochin University of Science and Technology, Kochi - CGPA: 8.9/10

WORK EXPERIENCE

Skynetclouds – Data Engineer Jan 2024 – Sep 2025
Remote, Contract

- Developed AI-powered solutions for a real estate platform, including property recommendation systems and price prediction model.
- Designed and deployed scalable data pipelines using **AWS Glue, and Redshift** to process property listings, user behavior, and market data.
- **Developed RESTful APIs using Fast to serve personalized property suggestions, search history, and popularity-based listings in real-time**.
- Integrated structured and **behavioral data (clicks, views, searches)** to deliver tailored recommendations, similar to platforms like Amazon or Trulia.

- Added dynamic property tags (Previously Viewed, Recently Launched, Mostly Viewed, etc.) on property listings to improve user engagement.
- Automated model retraining and pipeline updates to ensure recommendations adapt to new property data and user interactions.
- Spearheaded the creation of an **AI assistant capable of answering real estate questions, estimating property prices, and providing investment insights.**
- Implemented an automated PDF parsing solution to extract project data and auto-fill forms for **builder inventory** and **pre-construction listings**, significantly reducing manual data entry and improving operational efficiency.
- Built a dynamic city-based footer in Python where links update with each search and take users directly to property listings.

NetObjex Inc. – Associate Data Science Engineer March 2021 – June 2023

Bengaluru

- Built and maintained scalable data pipelines to support the Kresus Super App, integrating user analytics and behaviour-driven insights.
- Developed **Python-based ETL workflows to ingest and transform large datasets from multiple sources including MongoDB and external APIs**.
- Wrote advanced **SQL queries in Snowflake** to perform data transformation and aggregation, enabling the creation of accurate, insight-driven visualizations for reporting and analytics.
- Implemented automated image tagging functionality using **Cloudinary and OpenAI APIs**, streamlining media management for the platform and enhancing content classification.
- Developed chatbots using **Dialogflow and OpenAI** to enhance user interactions and automate responses within the Kresus Super App, improving support efficiency and engagement.
- Integrated **Google Analytics into the Property List platform to track user behavior**, engagement, and conversions, providing actionable data to refine digital marketing strategies.
- Created a Slack App that triggered automated alerts for users who failed to complete daily assessments in a COVID pre-authorization platform, ensuring timely compliance tracking.
- Designed and implemented interactive visualizations for the **Kresus Super App** analytical dashboard using **Python** and **Tableau**, enabling data-driven decision-making through clear presentation of user behavior and key business metrics.
