Professional Summary

Senior DevOps Engineer with 7+ years experience in AWS and Azure DevOps, successfully implemented CI/CD pipelines and managed Kubernetes clusters. Proficient in Terraform and Docker, I excel in automating infrastructure and fostering collaboration across teams, ensuring seamless application deployment and robust cloud security practices.

Technical Skills

- CI/CD pipelines
- Kubernetes management
- Grafana
- Docker
- Kubernetes cluster creation
- Terraform
- VM's
- Storage blob
- Artifactory
- Autoscale
- Azure Traffic Manager
- AKS
- ACS
- Azure Dashboards
- AWS
- EC2
- VPC
- IAM
- RESTAPI
- Json
- Jira
- webhooks
- Ansible
- Shell Scripting
- Python Scripting

Experience

Nowcom Global Services

Senior DevOps Engineer | Hyderabad 10/2020 to 08/2025

- Implemented CI/CD pipelines utilizing Azure Pipelines and GitHub Actions for automated workflows.
- Orchestrated container deployments via managed Kubernetes clusters and Azure Kubernetes Service (AKS).
- Automated infrastructure management with Terraform, improving efficiency in resource allocation.
- Maintained Docker containers for consistent application deployment across environments.
- Implemented a GitOps workflow using Argo CD, managing declarative application deployments.
- Designed logging and monitoring frameworks using ELK stack and Prometheus.
- Worked closely with development teams to facilitate smooth deployment processes.
- Oversaw Azure resource management while enforcing security best practices.
- Employed Azure Monitor for performance insights and health checks.

Impelsys

DevOps Engineer | Bangalore 10/2017 to 10/2020

- Launched and configured Amazon EC2 (AWS) Cloud Servers using AMIs (Linux/Ubuntu).
- Established AWS Lambda functions in Python utilizing Boto3.
- Deployed Amazon Linux, Ubuntu, and Windows EC2 instances with Elastic IP network interfaces.
- Executed hardening procedures for Windows and Linux AMIs.
- Administered cloud management tools and frameworks to enhance operational efficiency.
- Created support cases with AWS for critical issues and ensured timely follow-up.
- Designed automated solutions for server build, management, monitoring, and deployment across multiple platforms.
- Developed a private cloud using Kubernetes to support DEV, TEST, STAGE, and PROD environments.

Education

B.Tech
Jawaharlal Nehru Technological University
Kakinada

Gyansys

Linux Administrator | Bangalore 12/2014 to 09/2017

- Configured crontab jobs to automate task scheduling effectively.
- Managed file systems including NFS and FTP, alongside installations of Apache web servers.
- Administered MariaDB database, creating users and assigning access rights.
- Demonstrated strong conceptual understanding of security protocols and text editors like VI, VIM, and Nano.
- Built customized Amazon Machine Images and conducted monthly snapshots for backup.
- Troubleshot Linux Operating System issues, providing support for development and QA environments.
