Objective

Detail-oriented and results-driven Splunk Developer with around 4 years of experience at Tata Consultancy Services, specializing in end-to-end log monitoring, data onboarding, and real-time observability. Proven expertise in configuring and optimizing Splunk Enterprise across hybrid environments (Windows/Linux/Cloud), developing advanced SPL queries, ITSI dashboards, alerts, custom reports, and correlation searches. Experienced in ITSI and SIEM integrations to enhance service intelligence, security monitoring, and operational visibility. Skilled in automating monitoring workflows, integrating Splunk with CI/CD pipelines, and improving incident response. Seeking to leverage my Splunk expertise to drive system reliability, security, and scalability in a forward-thinking organization.

Experience

- **Tata Consultancy Services** November 2021 - Present
  Splunk Developer
  Client: Vodafone (Australia)
  Duration: Feb 2022 – Present
  Location: Remote (India)

    - Implemented end-to-end observability using Splunk Enterprise, integrating data from Linux/Windows servers via Universal Forwarder, HEC, and Syslog.
    - Created efficient SPL queries, dashboards, and alerts for infrastructure and application monitoring.
    - Integrated OpenTelemetry for ingesting logs, metrics, and traces from microservices in Azure and AWS.
    - Developed regex-based field extractions and tuned props/transforms for better parsing and indexing.
    - Automated config deployments using Git and collaborated with DevOps for CI/CD observability needs.
    - Handled troubleshooting, performance tuning, and RCA for critical production issues using Splunk insights.

Skills

Monitoring & Observability:
* Splunk Enterprise & Splunk Cloud
* Splunk SPL (Search Processing Language)
* Dashboards, Alerts, Reports
* Knowledge Objects (Lookups, Macros, Tags, Event Types)
* Splunk DB Connect
* Real-time and Historical Log Analysis

Data Onboarding & Parsing:
* Universal Forwarder (UF), Heavy Forwarder (HF)
* Syslog Integration (UDP/TCP)
* HTTP Event Collector (HEC)
* OpenTelemetry Integration
* props.conf & transforms.conf configuration
* Field Extractions & Regex-based Parsing

Automation & CI/CD Integration:
* Integration with DevOps tools (Git, Jenkins, CI/CD pipelines)
* Automation of Splunk dashboards and alert configurations
* Use of scripted inputs for custom log ingestion

Cloud & Infrastructure:
* Experience with AWS / Azure logging solutions
* Linux & Windows Server log monitoring
* Virtual Machines (on-prem & cloud-based)
* Infrastructure Monitoring & Performance Tuning

Soft Skills:
* Strong troubleshooting and analytical skills
* Effective communication with cross-functional teams
* Agile and ITIL-aligned working model.

Linux and Windows Servers
* Managed VM setup and log automation using shell scripts on cloud Linux instances.
* Configured Splunk Universal Forwarder using PowerShell on Windows-based servers.

Git & GitHub
Used for version control and triggering automated deployments via GitHub Actions.

Azure / AWS (Multi-Cloud)
Deployed Kubernetes clusters and resources uniformly across all three cloud platforms.

Docker and Kubernetes
* Containerized applications for consistency across environments.
* Orchestrated application deployments with rolling updates, autoscaling, and self-healing.

Splunk Forwarders (UF and HF)
* Forwarded logs from servers and containers to Splunk for analysis.
* Parsed and routed log data to the correct Splunk indexers.

ITSI Integration
Built KPI-based dashboards and service trees for real-time observability.

SIEM Use Cases and Bash scripting
* Created alerts for suspicious logins, system anomalies, and threshold violations.
* Used for installation, service checks, and Splunk configurations on Linux systems.

Troubleshooting
Resolved data flow issues, log gaps, and configuration errors using SPL and system diagnostics.

Certifications

- - Microsoft Certified: Azure Administrator (AZ-104)

Projects

- Devops Project
  1. Centralized Log Monitoring System
  * Designed and implemented a centralized logging platform using Splunk, UF/HF, and syslog for Vodafone Australia.
  * Created dashboards, alerts, and parsing rules (props/transforms.conf).
  * Led log onboarding and resolved ingestion, parsing, and indexing issues.

  2. Real-Time Observability with OpenTelemetry
  * Integrated OpenTelemetry with Splunk HEC for microservices tracing.
  * Built latency/error dashboards and troubleshooting alerts.
  * Enabled real-time issue detection.

  3. Splunk Performance & License Optimization
  * Tuned heavy SPL searches and dashboards to enhance performance.
  * Implemented data retention policies and managed license consumption.
  * Used Monitoring Console, btool, and logs for system troubleshooting.

Education

- Rajiv Gandhi University of Knowledge Technologies, Basar 2017-2021
  Bachelor of Technology
  7.10

Declaration

- I confirm that the details mentioned in this resume are accurate and authentic to the best of my knowledge.
