SHREYA SAHU

AWS DevOps Engineer

■ Pune, Maharashtra | ■ shreyasahu1603@gmail.com | ■ +91 9340485756 | ■ LinkedIn

Summary

AWS Cloud Engineer with 4+ years of hands-on experience in designing, deploying, and maintaining scalable cloud infrastructure using AWS services. Skilled in EC2, S3, Lambda, IAM, CI/CD, containerization, and Infrastructure as Code. Experienced with DevOps tools like Docker, Jenkins, and Git. Strong foundation in Python, Linux systems, scripting, and automation. Adept at optimizing cloud environments for cost and performance. Recognized as Performer of the Year at TCS and successfully cracked TCS Digital with Python expertise.

Skills

Cloud Platforms:	AWS (EC2, S3, RDS, Lambda, IAM, CloudFormation, CloudWatch, Route53, CloudFront)
DevOps:	Docker, Jenkins, Git, GitHub, CI/CD Pipelines, Ansible
Scripting & OS:	Windows, Linux (on-prem and cloud), Shell Scripting, Bash
Programming:	Python
IaC:	Terraform, AWS CLI
Monitoring & Logging:	AWS CloudWatch, Log Insights
Database:	MySQL

Professional Experience

System Engineer – Tata Consultancy Services (TCS), Pune (09/2022 – Current)

Project: Tata Steel – AWS DevOps Support

- Deployed and maintained AWS EC2, S3, Elastic Beanstalk, VPC and RDS infrastructure for production web apps, reducing deployment time by 60% and improving uptime to 99.9%.
- Configured Jenkins pipelines with JDK 17/21, Maven, Docker, Nexus, and AWS ECR/ECS to build, store, and deploy containerized applications.
- Developed Ansible playbooks and modules with dynamic inventory for automation tasks, including Tomcat server configuration and deployment.
- Managed IAM policies for role-based access control and implemented security best practices.
- Configured web hosting and DNS routing using AWS Route 53 for high availability and reliability.
- Implemented S3 lifecycle management policies to optimize storage costs and data retention.
- Improved performance and cut infrastructure costs by roughly 30%.
- Performed on-premises to AWS cloud migration using Terraform to automate provisioning.
- Managed on-premises Linux infrastructure including server setup, patching, and performance monitoring.

Python Developer – API Support & Integration (AIG Japan Project) (07/2021 – 08/2022)

- Designed and deployed RESTful APIs using Flask to support internal tool integration and data exchange between services.
- Implemented GET, POST, PUT, DELETE endpoints with request validation, error handling, and JSON responses.
- Created API documentation using Swagger and Postman collections to assist support teams and ensure smooth onboarding.
- Integrated logging and exception tracking to monitor API health and simplify debugging during support operations.
- Collaborated with QA and support teams to reproduce issues, test endpoints, and deploy fixes using Git version control.

Education

Bachelor of Engineering (B. Tech.) - Electronics & Communication | June 2021

Gyan Ganga Institute of Technology and Sciences | CGPA: 9.03/10

Certifications

AWS Certified DevOps Engineer - Professional
