SWAPNIL SONAWANE

AWS CERTIFIED DEVOPS ENGINEER

91-8237766416| swapnil171998@gmail.com | sampleritgithub2 | LinkedIn: inswapnil-sonawane-sasa2598

PROFESSIONAL SUMMARY

Results-driven AWS Certified DevOps Engineer with 4+ years of proven expertise in cloud architecture, microservices deployment, automation, and DevOps best practices. Strong track record of delivering robust CI/CD pipelines, scalable infrastructure, and containerized solutions using AWS, Jenkins, Kubernetes, Helm, and Terraform. Adept at improving deployment efficiency, optimizing system performance, and enabling business agility in dynamic engineering environments.

CORE COMPETENCIES

- **Cloud Platforms:** AWS (EC2, S3, IAM, VPC, CloudWatch)
- **Automation/Scripting:** Python, Shell scripting
- **CI/CD:** Jenkins, GitHub Actions
- **Containerization:** Docker (multi-stage, distroless images)
- **Orchestration:** Kubernetes (on-premises, Helm)
- **Infrastructure as Code:** Terraform, remote backend (S3, DynamoDB)
- **Monitoring/Logging:** Prometheus, Grafana, AWS CloudWatch
- **Project Management:** Agile (Jira board)
- **Version Control:** Git, GitHub

WORK EXPERIENCE

Senior Software Engineer
Mphasis | Jan 2024 – Present

- Architected and implemented AWS cloud infrastructure for microservices, integrating EC2, S3, IAM, and Lambda to enable scalable and secure deployments.
- Developed and deployed Java-based microservices using Jenkins-driven CI/CD pipelines with automated testing and code quality gates.
- Led Kubernetes cluster upgrades (on-premises), achieving zero-downtime version migrations and strengthening high-availability for enterprise banking applications.
- Built multi-stage and distroless Docker images, optimizing deployment size and security posture.
- Created Helm-based Kubernetes deployments, automating rollouts and rollback strategies.
- Provisioned AWS infrastructure using Terraform, standardized reusable modules, and managed remote state via S3.
- Troubleshot critical Kubernetes issues (ImagePullBackOff, CrashLoopBackOff), maintaining 99.9% uptime for production workloads.
- Automated end-to-end CI/CD workflows via Jenkins, reducing deployment times by 30% and accelerating feature releases.
- Implemented advanced monitoring with Prometheus and Grafana, ensuring actionable alerts and resource optimization.
- Designed Python automation scripts for environment provisioning, operational workflows, and infrastructure tasks.
- Drove agile delivery, facilitating sprint events, backlog grooming, and Jira-based tracking to ensure timely and effective releases.

Software Engineer
Mphasis | Oct 2021 – Dec 2023

- Collaborated in designing and deploying Java microservices within AWS environments, emphasizing test automation and robust code integration.
- Orchestrated containerized deployments using Docker and Helm, supporting rapid scaling and recovery.
- Managed Terraform backends, promoted infrastructure standardization, and mitigated manual errors in cloud provisioning.
- Supported Kubernetes pod and node troubleshooting, resolving performance and stability issues in production clusters.
- Utilized Python for scripting operational tasks and automating cloud resource management.
- Monitored system health and performance with Prometheus/Grafana, taking proactive action on identified bottlenecks.
- Enhanced team collaboration via advanced Git workflows, driving consistent software delivery across project milestones.

EDUCATION

Bachelor of Engineering, Computer Science
Pune University, Maharashtra
Sep 2017 – May 2021

CERTIFICATIONS

AWS Certified Solutions Architect Associate (Credly link)

PROJECTS & AWARDS

- Delivered automation solutions ahead of schedule, recognized for efficiency and excellence.
- Earned multiple awards for issue resolution, teamwork, and timely delivery in DevOps initiatives.
