CARRER OBJECTIVE

I aim to contribute to an organization's success by leveraging my skills to deliver innovative solutions. Committed to continuous learning, I strive to stay ahead of industry trends and best practices. My focus is on achieving organizational goals while enhancing my capabilities through meaningful collaboration.

PROFILE SUMMARY

- 4 years of IT experience, with over 3.5 years specializing in Big Data technologies such as **HDFS, Hive, Sqoop, Airflow, SQL, Spark, Pyspark.**
- Extensive hands-on experience in designing, developing, and implementing ETL pipelines across various business domains like finance.
- Skilled in building modern data solutions using **AWS services** for data visualization.
- Proficient in Hadoop architecture and components like **HDFS, NameNode, DataNode, YARN, and Job Tracke**r.
- **Proficient in Data Structures**, including arrays, linked lists, stacks, queues, trees, and graphs.
- **Skilled in Algorithm Design & Optimization**, covering sorting, searching, recursion, dynamic programming, and greedy algorithms.
- **Strong Problem-Solving & Complexity Analysis** with a focus on optimizing time and spaceefficiency..
- Strong expertise in developing Spark applications using Python, RDDs, DataFrames, and Spark SQL.
- Experienced in data ingestion and migration using **Sqoop** and managing Hive tables with dynamic partitioning and bucketing.
- Proficient in Airflow for managing workflows and scheduling Hadoop jobs through DAGs.
- Hands-on experience with Hive and SQL, including creating databases, tables, views, and optimizing queries.
- Experienced in installing, configuring, and managing Hadoop clusters and Big Data infrastructures.
- Adaptable, with strong communication and analytical skills, and the ability to work both independently and as part of a team.
- Experienced in implementing **ETL** processes, data transformations.
- Skilled in troubleshooting, optimizing, and fine-tuning **Spark** jobs for performance improvements and efficient resource management.
- Proficient in version control using **Git** for collaborative development and maintaining code integrity across teams.

TECHNICAL EXPERTISE

Programming Language	Pyspark, Python, Java
Big Data Skills	HDFS, Spark, Pyspark, Python, Hive, Sqoop, Airflow, Yarn, AWS
No-SQL	HBase.
RDBMS	MYSQL, Oracle, SQL.
Tools	Winscp, putty.
IDE	Eclipse, Intellij.
Operating Systems	Windows, Linux, Cloudera.

ACADEMIC DETAILS

- Completed B. Tech (Full Time) in Computer Science and Engineering from Presidency University, Bangalore, 2022

WORK EXPERIENCE

- Worked as a Big data developer in **SCANFII SOFTWARE TECHNOLOGIES** from January 2022 to present.

Project Experience

Project 2

Client : **Global foundries**

Role : **Data Engineer**

Environment : **Spark, Hive, Python, PySpark ,Aws(S3, RedShift,EMR)**

Duration : **2024 Jan to till now**

Description

Streamlined the loss mitigation process by automating the extraction of account-level data from Product Processor, Collection System, and GENESIS. Ensured alignment with regulatory standards while enhancing risk management workflows. Focused on optimizing sorting processes to support the retail sector's loss mitigation goals.

Roles & Responsibilities

- Involved in converting SQL queries into spark transformation using Spark Data Frames using Pyspark.
- Worked with data ingestion frameworks for importing data from different locations such as HDF, Hadoop, Linux, Developed Spark Programs using python to satisfy the business requirement.
- Develop and maintain ETL pipelines using PySpark and AWS services (EMR, Lambda) to automate data movement and transformation processes.
- Utilize AWS S3 buckets for storing large volumes of Account level data. Manage and run big data applications on AWS EMR clusters. Implement ETL (Extract, Transform, Load) processes using AWS Glue for seamless data integration.
- Take corrective actions to ensure data accuracy and completeness.
- Identify and optimize performance bottlenecks in data pipelines and queries.
- Implement techniques like partitioning, clustering, and indexing to improve query performance.
- Monitor resource utilization and adjust configurations as needed.
- Manage and maintain AWS infrastructure (S3, EMR, Lambda) for data processing.

Project 1

Client : **IKEA**

Technology : **SQL , Hive**

Role : **Software Engineer**

Duration : **2022 Mar to 2023 Aug**

Description

Contributed to an IKEA project as a Software Engineer, focusing on SQL and Hive for data extraction, transformation, and reporting. Collaborated with cross-functional teams to optimize data flow, ensuring seamless integration and supporting business operations through efficient data management.

Roles & Responsibilities

- Developed and optimized complex SQL and hive queries for data extraction, transformation, and reporting.
- Collaborated with cross-functional teams to understand business requirements and deliver high-quality software solutions.
- Assisted in designing and implementing database structures, ensuring seamless integration with various applications.
