---

PROFILE SUMMARY

Experienced **Data Engineer** with over **4 years** of hands-on expertise in designing and implementing scalable data pipelines and building analytics solutions across healthcare and e-commerce domains. Proficient in building robust **ETL** workflows **using PySpark, SQL**, **AWS and Azure** cloud platforms, with a strong command of tools like Glue, EMR, Redshift, Athena, Databricks, and ADF

EXPERIENCE

Currently working as a Data Engineer at Infinx Healthcare – From Feb 2023 To Till Date

Previously worked as Data Engineer at Optimistic Infosolutions Pvt Ltd – From Aug 2021 To Jan 2023

TECHNICAL SKILLS

Programming: Python, PySpark, SQL
ETL Tools: AWS Glue, EMR, Redshift, Athena, S3, Lambda, EventBridge, SNS
Visualization: Advanced Excel, Dashboarding, Qlik Sense
Data Engineering: ETL Development, Data Aggregation, Data Cleansing, Automation
Cloud & DevOps: Git, REST API (Flask), CI/CD basics

PROFESSIONAL EXPERIENCE

Project 2: Infinx Healthcare, Bengaluru | *Feb 2023 – Present*

Project Summary:

> The goal of this project is to automate the revenue cycle analytics pipeline for a healthcare service provider, integrating data from claims, payments, appointments, and compliance tools. The data engineering team focused on building scalable, secure, and reliable data workflows to provide real-time business visibility and reduce operational overhead.

Responsibilities:

- Designed and deployed **automated ETL pipelines** using PySpark, SQL, and AWS Glue for structured/unstructured data stored in S3 and Redshift.
- Developed dynamic, real-time dashboards in **AWS QuickSight**, integrating Athena queries on S3 to enable self-service analytics for business users.
- Used **EMR (Spark, Hadoop)** to run distributed data transformations on large-scale datasets, reducing query response time by 30%.
- Created reusable **automation scripts** using Python, PySpark, and AWS CLI to reduce manual reporting efforts by over 50%.

- Built RESTful APIs with **Flask** to serve transformed data into internal tools, improving data accessibility and integration.
- Optimized complex SQL queries and built ad hoc reports using advanced Excel for business insights and stakeholder decisions.
- Partnered with product managers and business leads to translate requirements into data models and KPI dashboards.

Project 1: Customer Purchase Analytics – E-commerce Domain

Client: Getafix Technologies, Bengaluru | Aug 2021 – January 2023

Project Overview:

The objective of this project was to build an end-to-end modern data platform on Azure to analyze customer purchase behavior, optimize marketing campaigns, and drive personalized experiences. Data originated from web logs, transaction records, CRM systems, and product catalogs, processed and modeled to support insights for Sales and Marketing teams.

Responsibilities:

- Developed scalable ETL pipelines using **PySpark on Azure Databricks** to ingest and clean millions of records from **Azure Data Lake** Storage (ADLS Gen2).
- Handled slowly changing dimensions (SCD Type 2) using Delta Lake and implemented schema evolution for flexible model updates.
- Built logical data models in **Azure SQL Database** and Synapse Analytics to support use cases like customer segmentation, and churn analysis.
- Created scheduled and parameterized pipelines in **Azure Data Factory** (ADF) to orchestrate end-to-end workflows, including error handling and data validation.
- Designed Power BI dashboards to track KPIs such as daily sales, top-selling products, cart abandonment rates, and campaign ROI.

Tech Stack:

Azure Databricks, PySpark, Delta Lake, Azure Data Lake Storage (ADLS), Azure Data Factory, Azure SQL, Power BI, Azure DevOps, Azure Purview, Git.

EDUCATION

B.C.A. – Computer Applications
JIS College of Engineering, West Bengal | 2018 – 2021

Higher Secondary (Science)
Binodini Girls High School | 2017 – 2018
