Automation Engineer
PRAVEEN

Mobile No: 97048 40301
Email: praveenkumarmodepalli@gmail.com

Summary

- Over **5.1 years** of experience in **selenium** and **REST API** automation**.**
- Experience in writing **XPATH** selectors to identify web elements.
- Expert in python selenium **web driver** to automate UI test cases.
- Developed **Keyword Driven** Framework Using Selenium Web Driver in **Robot Framework**.
- Expert in **REST API** automation using python requests module.
- Work experience in **API CRUD** (GET, POST, PUT, and DELETE) operations.
- Hands-on experience on **GIT** repository tool for code management.
- Good exposure on **re, selenium, requests, logging, pytest.**
- Expert in working in Testing Methodologies **Agile – Scrum Model.**
- Involved in the entire **QA** process, well acquainted with all phases of **SDLC** and **STLC** and had experience in testing very complicated applications.
- Experience in logging defects using **JIRA**, performed defect tracking and reporting.
- Used **GitHub**, source code management tool for code re-usage, high portability extending scope of Automation Testing
- Basic understanding of **Wi-Fi standards**:802.11a/b/n(Wi-Fi 6), **802.11n association process**, Different authentication types like 802.1x, open PSK.
- Understanding of OSI and TCP/IP model and function of **Hub, Switch, Router.**
- Experience in networking **protocols** and **VLAN,WAN**.
- Knowledge of networking commands like **ifconfig,iwconfig,tcpdump,nmap,traceroute,nslookup.**

Education

- **B.Com** from SK University, Anantapur

Technical Skills

▪ **Tools**	Selenium Web driver,Katalon studio, Jira, and postman
▪ **Languages**	Python
▪ **Databases**	MySQL
▪ **Bug Tools**	JIRA
▪ **Framework**	Robot Framework and Pytest

PROFESSIONAL EXPERIENCE

Company: **VVDN Technologies pvt ltd**

Job Title: **Sr Software Engineer**

Duration: **Since Nov'2024 to Till date**

Location: **Bangalore**

Project Details

Project **CONNECT APPLICATION**

Environment **Python, selenium and Robot framework**

Duration **Since Nov 2024 to till date**

Project Description:

It is a multi-tiered saas platform for configuring and monitoring routers.With powerful dashboards and insightful diagnostics, customers can track device health and status in real-time. Monitor datausage, set alerts for overages, and ensure seamless network managemant. Remotely configure device-individually or in bulk-eliminating the need for costly truck rolls, Built on a closed-device communication framework, this platform enables efficient and secure router management with ease.

Roles and Responsibilities:

- Involved in designing and executing test scenarios for manual and automation testing of the connect web application.
- Debugging network-related issues such as OSI model connectivity, DHCP, and firewall configurations with developers.

- Worked on the API Automation with the help of the Robot Framework.
- GUI Automation using selenium and Robot Framework.
- Modifying automation test suites based on changes in network protocols and security policies.
- Automating regression test cases for DNS,VPN configurations.

PROFESSIONAL EXPERIENCE

Company: **Qualcomm pvt ltd**
Job Title: **Software Engineer**
Duration: **Sept'2023 to Sept 2024**
Location: **Bangalore**

Project Details

Project **GLOBAL PAYMENT TRANSACTION SYSTEM(GPTS)**
Environment **Python, selenium and Robot framework**
Duration **Oct 2023 to Sept 2024**

Project Description:

Working for banking payments system platform product and sales partner as DXC. The application has various payment schemes like SEPA Instant, Fed wire, ACH, SWIFT payments under one payment processing platform GPTS. The application is having two ways of processing file i.e., backend Swagger URL and front end GPTS UI. Front end UI is user login based and has capability of initiating payments for each scheme respectively. All admin related tasks can be maintained from UI. Each scheme has its own Route define. Each scheme follows its own compliance and regulatory standards. Each scheme is tenant specific and can process payment files of its own scheme only. The project uses various API connectivity to communicate with front end user requests. Automation testing is followed by BDD process.

Roles and Responsibilities:

- Preparation of design documents for automate test cases and received specifications from the manual team.
- Used git commands clone, push, pull and commit for code management.
- Created user define libraries, resource configuration files for new test suites.

- Used regular expressions for validating test suite log files.
- Developed automation scripts with exceptions and file handling in python.
- Created separate test suits for UI test cases using python selenium web driver.
- Involved into manual testing Regression, Sanity and functional testing.
- Attended daily standup meetings as agile methodology process.
- Giving estimation for the execution of test cases for the sprint releases.
- Executing the automated scripts and updating the log.

PROFESSIONAL EXPERIENCE

Company: HCL TECHNOLOGIES

Job Title: Lead Engineer

Duration: Since Nov'2022 to Aug 2023

Location: Bangalore

Project Details

Project SERVICE PROVISIONING

Environment Python and Selenium REST API, Storage

Duration Nov 2022 to Aug 2023

Project Description:

Service provisioning provide many features to manage servers from remote applications. Using service provisioning we can check health status for all servers through network and we can change behavior of server functionality as end user point requirements. Through service provisioning provide validation feature also to re verify after changing sever functionality whether it is working as end user requirement or not

Roles and Responsibilities:

- Interaction with clients to get requirement to develop and modify scripts.
- Working with manual team to know the exact functionality of the test case.
- Issues reporting/clarifications, raising bugs if product issues.
- Attending daily standup meeting and give updates.
- Involved in automating the test scripts using selenium web driver.
- Automated SP test cases using python script in Robot frame work.

- Developed scripts for automate web-based applications using python selenium web driver.
- Developed keywords in robot framework based on requirement.

PROFESSIONAL EXPERIENCE

Company: **STANVAC SYSTEM**

Job Title: **Software Engineer**

Duration: **Since Apr'2020 to Oct 2022**

Location: **Bangalore**

Project Details

Project **PEER REVIEW MILESTONE**

Environment **Python and Selenium REST API, Storage**

Duration **Apr 2020 to Oct 2022**

Project Description:

Peer Review Milestone is an application to know the process of applying configuration on network devices. There is a process to reach given configuration to the device many steps and approvals are required. Peer review milestone provide detailed information in UI page to know each request status and details. Using peer review milestone, we ca make port turn-up and turn-down

Roles and Responsibilities:

- Developed the Automation Test Scripts in Selenium WebDriver using python based on the design pattern Page Object Model for reusability.
- Prepared Test Cases using Data Driven, Hybrid, Modular, and Keyword Driven Framework in WebDriver.
- Prepared XML and Excel files for collection of data and Element Locators using object repository.
- Triggered Automation test suits using Jenkins, Continuous Integration Tool to generate reports and to trigger periodically.
- Project is under Agile environment, I attended daily standup meetings, provided daily status on manual and automation test results.
