Career Objective

To serve a growing organization to the best of my ability sincerely, honestly with hard labor and where I am the role player for the overall growth of the concern and give respect to my senior. I am ever keen to acquire some new technologies and climb the corporate to ladder by honest and hard work.

Professional Summary

- 6.3 Years of Hands-on experience in developing Windows based GUI applications using **Microsoft Visual C++, Win32, MFC, Component Object Model (COM).**
- Professional programming skills in C/C++ and implementing the OOPS concepts like Abstraction, Inheritance, Compile Time/Run-Time Polymorphisms.
- Good in C++ technical concepts like type castings, smart pointers, Pointer/Ref types, Deep Copying, Shallow Copying, Virtual destructors, Mutable, const, volatile and auto keywords.
- Hands on experience in writing Generic Code using **Template Functions and Template classes,** and **using the STL Containers like Vector, List, Stack, Queue and Associate containers Map, Multimap, Set and Multiset data structures.**
- Good understanding while implementing design patterns like **Singleton, Observer, Bridge, Class Factories,** and **Algorithms.**
- Good in developing **Thread-Safe objects** with proper exception handling mechanism.
- Good knowledge in Process, Threads and Synchronization objects like **Critical Section, Mutex, Semaphore and Events**.
- Experience in writing Visual C++ code in **multi-threaded.**
- environment with worker and User Interface threads.
- Hands on experience in developing Windows OS based GUI applications using Modal/Modeless dialog boxes and Doc/View architecture-based **SDI/MDI applications.**
- Debugging the **DEBUG/RELEASE** builds using Visual Studio Debugger and good knowledge in **TRACE/ASSERT/VERIFY macros.**

Education

Bachelor of Technology
ECE
Intell Engineering College
2017 Passed Out
Anantapur, A.P.

Skills

- ♥ C++11, OOPS,Design Patterns,Algorithms,Multithreading,C#
- ♥ Data Structures and STL
- ♥ Win32 API, and Microsoft Foundation Class (MFC) Library.
- ♥ MFC Doc/View and Component Object Model (COM)
- ♥ Developed and Integrated RESTful APIs in C++

Project 2

Project Name : Product Express-Works mainly on Calculator Technology.
Client : DXC Technology.
Duration : March 2022 to June 2025
Position : Software Developer
Organization : Luxoft A DXC Technology Company
Team Size 10
Location : Bangalore
Environment : C++, VC++ 7.0, MFC, Visual Studio 2008,2019,2022
SQL Server 2008

Description

Product Express – Calculator Technology is a high-performance calculation server developed for DXC Technology that provides financial modeling,trade settlement, and forecasting capabilities.It allows institutional clients to configure and execute large-scale financial calculations through a Calculator REST API.

The system supports C external functions, SQL-based extensions, and HTTP integrations, enabling flexible extension of business logic without modifying the core engine.

It also integrates with SQL Server, supports cross-platform deployment (Windows, Linux, macOS), and leverages AWS cloud infrastructure for scalability, storage, and monitoring.

The development applied modern C++ (11/14/17/20) standards, Win32/MFC frameworks for the console and GUI tools, COM component.

Module

Module 2: Automatic detection of free port numbers when creating a Calculator instance issue with conmaxelement-opt function when using set of instances. Creating new Calculator instance fails when SSL is enabled of CalcServer. configure from web console SQL, HTTP and possibly other external function types and RESTAPI to configure external function-SQL. Implementation of key maintenance and Generate XSD functionality in the web application to add the functionalities to web console. Automotive, AUTOSAR (Automotive open system Architecture), Embedded System. Updating external function resources files should be done through HTTP PUT on the REST API. Update External function through REST API. Get the Details of external function through REST API. Add external function support to the REST API specification of the Calculator On JSON/XML-based data exchange and serialization RESTful APIs using technologies such C++,ProductXpress Calculator Server to be able to add and configure C External functions through the Calculator REST API.

Project 1

Project Name : Gas Scheduling ‘Visual Cockpit’
Client : Triple Point Technologies (USA)
Role : Software Engineer
Organization : BOVEN TECHNOLOGIES PVT LTD
Duration : March 2019 TO March 2022
Team Size 10
Location : Bangalore
Environment : C, C++, VC++, MFC, Win32 API, STL, Multithreading

Description

Gas Scheduling ‘Visual Cockpit’ is a central control point that gives schedulers all the information required to perform complex scheduling — including balance, capacity, transportation cost and other critical decision-making data — displayed in real time, on a single screen.
Gas Scheduling Visual Cockpit provides the sophisticated systems to deliver efficient, profitable scheduling of physical natural gas, and it schedules with the real-time data they need, in the format they want, for the calculations and results they require.

Module

Module 1: Grouping Capabilities can reflect multiple service contracts, Group in whatever way you want to manage your path, including transactions, paths and group locations. Edit, un-group one leg or the entire group.
Extensive Balancing Tools Location balancing reflects all of the activity at the selected location – all transactions in, out and all transport at the location. Information about the location itself is included in the text.
Full Transport Management View all paths in one view, and see all service contracts in underlying text reflecting capacity, usage, balance and transport legs. From here, select one path to display in full view.

Roles and Responsibilities

- Capture files and display the result back to application.
- Bug analysis and fixing.
- Handling Threading logic to develop various reports.
- Handling software builds release activities.
- Implementation of Taxable & Tax-free exchange for securities.
- Understanding the Standard reports and real time Data views.
- Used Centralized environment SVN for handling code repository.
- Updates Stock-split modules (observable objects, RXJS).
- Running Application with different input scenarios and find the run time application behavior.
- Developed Angular Reactive Forms Validation for validating the trades and corporate actions.
- Implemented Managed C++ Wrapper Assembly for
- processing a spin offs & stock split for individual funds and
- multiple funds.
- UI Screens modified in stock dividends

Place: Bangalore
