Harish Baddika

hareeshkumarbaddika1999@gmail.com|8088757946

EDUCATION

B.Tech - Mechanical **Sep 2016 - Apr 2020**

NBKR Engineering College *Nellore , Andhra*

SKILLS

Programming Languages Javascript |Java | Typescript | SQL | HTML | CSS | SASS | Linux

Technologies React | Angular js | Spring Boot | microservices | microfrontend | kafka | Bootstrap | Tailwind css | Material UI | Webpack | Jest

EXPERIENCE

Publicis sapient **April 2024– Feb 2025**

Software Developer *Bangalore*

- Hands-on experience in **Java 8+, Spring Boot, REST APIs**, and **Microservice architecture**.
- Built responsive and dynamic UIs using **React.js**, **Next.js**, and modern JavaScript (ES6+).
- Integrated backend services with React-based frontend using **Axios/Fetch**, and managed state using **Redux** or React hooks.
- Worked with **CI/CD pipelines** using GitHub Actions, Jenkins, and Docker for streamlined deployments.
- Applied best practices in **code versioning (Git)**, **unit testing (JUnit, Mockito)**, and **API documentation (Swagger/OpenAPI)**.
- Proficient in **SQL databases** and experience with caching tools like **Redis**.
- Familiar with **Agile/Scrum methodology** and collaborative development environments.

Globus info services private limited **March 2021 – April 2024**

Software Developer *Bangalore*

*• Developing new user-facing feature and reusable components using **React.js**, **React-hooks**, **react-context**. Good experience in state management using Redux.*

*• Having good knowledge on event handling using **Redux- thunk**.*

• Having good hands-on experience in ES6 features. Translate design and wireframe into high quality code.

*• Experience in developing responsive web Application. Good **analytical skill** about PLUG INS. Passion for code standards, optimized and progressive enhancement. Good Knowledge on JSON.*

• Managed pull requests (PRs) and enforced coding standards, fostering code quality and collaboration.

NOTABLE PROJECTS

Eduley.com **May 2021 – Sep 2023**

Full stack developer *Bangalore*

- **Designed and developed** two independent user interfaces — Admin and Student portals — using **React** and **Material-UI**, ensuring a seamless and responsive user experience.
- **Implemented centralized state management** using **Redux** to manage shared data such as student records, announcements, and course lists across multiple components
- Created **modular and reusable UI components** with Material-UI to maintain consistent design and improve development efficiency.
- Developed **role-based routing and access control** to restrict functionalities based on user types (Admin vs Student).
- Integrated **RESTful APIs** to fetch and update data dynamically, improving system responsiveness and reducing page reloads.
- Built dynamic dashboards for **Admin to manage student data, courses, attendance, and results**, with form validations and responsive design.
- Created a **Student portal** to allow students to view their courses, schedules, attendance, results, and receive notifications.
- Ensured **cross-browser compatibility** and responsive layout across desktops, tablets, and mobile devices. Integrated **Spring Boot microservices** to handle modules like user management, course registration, attendance tracking, and results processing, enabling independent deployment and scalability.
- Utilized **Apache Kafka** for asynchronous communication between services (e.g., attendance updates, result processing notifications), improving system decoupling and real-time updates.
- Developed and documented **RESTful APIs** in Spring Boot and consumed them on the frontend to fetch/update

data dynamically, reducing page reloads and enhancing interactivity.

- Built **dynamic dashboards for Admin** to manage student data, courses, attendance, and results with **form validations** and a mobile-responsive design.
- Created a **Student portal** allowing students to view their courses, schedules, attendance, results, and receive real-time **notifications via Kafka consumers**.

Verizon **April 2024 – Feb2025**

Fullstack developer *Bangalore*

- **Led the migration** of a large-scale monolithic e-commerce application to a **Micro-Frontend architecture**, enabling independent deployment, scalability, and improved developer agility across teams.
- **Implemented Micro-Frontends** using **React.js** and **Module Federation**, allowing multiple teams to work on isolated features like product listing, cart, checkout, and user profiles independently
- Utilized **RTK Query (Redux Toolkit)** for efficient **data fetching, caching, and auto-refetching**, significantly improving API performance and reducing redundant network calls.
- **Improved overall application performance** by implementing code-splitting, lazy loading, and dynamic imports for route-based micro-frontends.
- Integrated **CI/CD pipelines** using **GitHub Actions**, automating the build, test, and deployment processes for each micro-frontend independently.
- Applied **performance monitoring tools** (like Lighthouse, Web Vitals) to measure and optimize application load time, render speed, and interactivity.
- Collaborated with cross-functional teams including backend, DevOps, and QA to ensure smooth end-to-end delivery of microservices and frontends.
