MAHESWAR

+91-9014755955 **E-Mail**:maheswarreddy9493@gmail.com

Professional Summary:

- Having 5+ **years** of experience, out of which 1.8 **years** of experience in Hadoop development and 1.4 year of experience on Spark and Scala and **1 year of of experience on BDD and** remaining experience with **Pyspark ,Python and AWS services(Lambda,GLue,,Dynamodb,S3,Athena)**
- Hands on experience creating RDD's, DataFrame's and DataFrame by using **SPARK CORE and SPARK SQL.**
- Hands on experience with **BigData** core components and Ecosystem**(Hadoop, HDFS, MapReduce, YARN, Hive, Pig and Sqoop).**
- Experience in importing and exporting data using Sqoop from HDFS to Relational Database Systems (**RDBMS**) and from **RDBMS to HDFS**
- I have Good Knowledge on **NOSQL** databases like as **HBase.**
- I have experience with **Pyspark and Python**
- I have experience on **BDD**
- I have knowledge on **Terraform and Terratest**

Professional Experience:

- working as L2-Enginner at **HTC Global Services** from Dec-2021 to till date
- worked in **Quess Corp** Jun-2021 to Oct-2021
- Worked as Associate in **Cognizant from APR 2019 to JUL 2020**

Qualifications:

- B-Tech (CSE) from **Stanley Stephen College of Engineering & Technology** , JNTU University Ananthapur(year of passing - 2014)

Technical Skills:

Big data Technologies	**: Spark SQL, Spark Core, Hadoop, HDFS, Hive, HBase, Pig, Sqoop, Oozie**
Aws Skills	**: S3,Glue, Athena,Lambda,Dynamodb**
Languages	**: Scala, Python**
NoSQL DataBases	: **HBase**
Databases	**: MySQL, Oracle**
IDE's	**: IntelliJ IDEA,Pycharm,VS code**

PROJECT #1: HTC

Project Name : **EIDC**
Environment : S3, HIVE, Apache NIFI ,Glue and Pyspark
Duration: APR -2024 to present

Description:

This Project is moving data from **HIVE** to **AWS S3** by using **Apache NIFI and** processed data using **PySpark**

Roles and Responsibilities:

- We have moved data from hive to s3 using NIFI
- Once data is avaible on Hive we have validate the data like count
- Then after validation done we have moved data from hive to s3
- Once data is availble on s3 we have validated s3 data like count
- Read raw data from S3 into AWS Glue using PySpark for processing large-scale datasets
- Applied data trasformations such as filtering, column renaming and null handling using PySpark DataFrame operations
- Stored the transformed data back into s3 in partitioned and compressed parquet format for optimized querying

PROJECT DETAILS :

PROJECT #2: HTC

Project Name : PFA AWS Modernization
Environment : Dynamodb,Lamda,Glue,S3,BDD
Duration : APR-2023 to MAR-2024

Description:

This Project is a Moderanization project which is being developed in aws from mainframe environment

Roles and Responsibilities:

- We are testing API endpoints
- Once API enpoints are availble,end-to-end testing should be done on the available end points
- BDD framework is setup in our local machine to perform the functionality testing

PROJECT DETAILS :

PROJECT #3: HTC

Project Name : Unilever – Business Analytics
Client : Unilever, USA , INDIA.
Environment : hadoop, hdfs, map reduce, pig , hive , spark , scala.
Duration : Dec 2021 to Mar 2023

Description:

Unilever is getting the source data from different source systems. As part of the same business each customer would be offered with different types of products based on their needs. Customer might have retail type of products, baby products, home electronics etc. To maintain this much of huge volumes of, different verities of data in traditional databases is a very tedious process. To meet the scaling needs of data of Unilever, re-plat forming of current data warehouse system to hadoop solution

In Case of Map Reduce processing working with huge volume of data is a performance bottle neck with respect to multiple disk reads/writes...To overcome the same performance related challenges in place of PIG , HIVE we are going to replace with SPARK processing where we will get performance optimization with respect to IN_MEMORY Cluster Primitive model.

Roles and Responsibilities:

- Experienced with batch processing of data sources using Apache Spark.
- Experienced in implementing Spark RDD transformations, actions to implement business analysis.
- Implemented Spark using Scala and Spark SQL for faster testing and processing of data.
- Implemented partitioning, dynamic partitions and buckets in HIVE.
- Involved in converting Hive/SQL queries into Spark transformations using Spark RDDs, Scala.

PROJECT #4: Cognizant

Title : Health Care
Duration : APR 2019 to Jul 2020
Environment : HDFS, Map Reduce, Hive, Pig, Sqoop, MySQL.

Description:

In this project, we will process the metadata datasets coming with the thousands of records of patients from various hospitals. The purpose of publishing this dataset is to figure out the patients

depending up on various constraints like type of disease, depending upon gender, age, seasonal diseases, depending upon location etc.

Specifically, in this project we will remove the duplicate records and separate them depending on constraints. We will look at the metadata files which contain tables about patient's records depending upon diseases and their locations.

Roles and Responsibilities:

- Analyzing the **metadata** as per the requirements
- Loaded the data in HDFS from local system.
- Writing the **pig scripts** for **processing** the data.
- Created **hive table** with **schema and loaded the data using Sqoop.**
- Writing queries in hive to map the data resided in HDFS.
- Written java code for Map Reduce job.
